

Climate change: The threat is real

Outline

1- Introduction

This is statement, Climate change is a real threat to a livable planet. In fact, human activities are responsible for rise of temperature that leads global warming. Resultantly, there is a severe loss of agriculture, human lives, health etc. However, certain assessments on climate change by COPs, Kyoto Protocol, NCAP, and forestation will be beneficial to address this issue.

2- Climate change is real threat to a livable planet.

3- Factors that contributes in climate change

- a) Political instability: bad governance and wars
- b) Massive deforestation rises global temperature
- c) Burning of fossil fuels by human
- d) Widening use of private vehicles
- e) Rapid industrial production
- f) Lack of education and awareness about climate change

4- How the climate change is a threat to life?

- a) Loss of agriculture and crop destruction
- b) Food insecurity impacts human life
- c) Uncontrolled flow of floods
- d) Threat to water life
- e) Outbreak of infectious diseases
- f) Negative impacts on labour
- g) Dangerous for human survival

5- Mitigations to address climate change issue

- a) COPs conference on climate issue
- b) Kyoto protocol: Paris Agreement and Carbon Trading
- c) Pakistan's National Clean Air Policy (NCAP)
- d) Afforestation and reforestation
- e) Use of modern technology to cope climate change

6- Conclusion.
