

## Précis 2008

The scientists and psychologists of the modern time believe on Darwin's concept of evolution. According to this notion all that matter is one's physical strength. The followers of this belief separate one's physical-self and psyche. This led man towards materialism by ignoring feelings and emotions. This gave birth to capitalism and communism that ended the human's cultural growth. Today the scientists are playing a destructive role, as for pleasing their leaders they are destroying the world. This attitude had raised many questions on the role of influential entities and man as a specie. The reason of

creation is not understood, the universe, life, and man are not taken in consideration as a unit.

**Title:** Destructive Impacts of Human Evolution
