

Title: Perils of Earthquake

When an earthquake strikes, the world trembles. The power of an earthquake is greater than anything. Scientists are finding way of combating earthquakes.

Earthquakes starts without warning. It damages our system.

Geologists estimate during the tremors, whole of the state moved over 80 feet west into the Pacific Ocean.

This is problem that scientists face. Scientists work on these. where earthquake will strike at least some precautionary measures can be taken to save lives and property.
