

Global Warming: Its causes and Consequences

OUTLINE

1. Introduction

Thesis Statement: Global warming has causes and consequences on all over the world. These causes and consequences have made global warming a serious threat to a great extent. However, by applying preventive measures it can be restored.

2. Causes and consequences of global warming

3. Causes of Global Warming

- a) Emission of green house gases
- b) Excessive use of Insecticide, Pesticide and fertilizers
- c) Deforestation
- d) Burning of fossil fuels
- e) Nuclear radiation
- f) Rapid Urbanization
- g) Population Explosion

4. Threats due to Global Warming

- a) Severe floods
- b) Rising sea level
- c) melting of glaciers
- d) Depletion of ozone layer
- e) Loss of biodiversity
- f) Decline in agriculture Production
- g) Increase the range of diseases

5. Measurement to counter Global Warming

- a) Plantation on mass level
- b) Use of renewable resources
- c) Reduction of greenhouse gases

6. Conclusion
