

The Threat of Global Warming and the ways to Counter it.

Outline :

I. Introduction

Thesis Statement :-

The threat of global warming have proved more disastrous for developing and the underdeveloped countries, through becoming a victim of natural disasters. This menace can be countered through the use of renewable energy resources and genetically engineered crops.

II. Analyzing the meaning of global warming

III. Assessing the current status of Global warming

IV. How Global warming become a threat in the contemporary world?

- a) Shrinking Economy
- b) Melting of glaciers
- c) Increase in natural disasters.

Date: _____

Date: _____

- d) Rising health problems
- e) Deteriorating environmental habitats due to migration of animals.
- f) Increase in migration of people towards developing countries.

VII Conclusion

IV Case study of Pakistan

VI what are the possible measures that adoption can treat the menace of global warming?

- a) To promote use of renewable energy resources
- b) To produce new genetically engineered crops
- c) To reduce the production of greenhouse gases
- d) To control population explosion
- e) To initiate a global reforestation campaign
- f) To provide economic, technological assistance to the climate hit countries
- g) To use social media efficiently for the promotion of Green Earth.
- h) To implement climate change agreements.
