

## Energy Crisis, in Pakistan

This is most growing issue in country. Since the independence of Pakistan, our government could not overcome at this problem. There are several reasons behind this failure like political instability, changing in economical models again and again and major one is making of Energy from oil. As you know Pakistan imports oil which is expensive source of energy. So country can not resolve this problem till now. Shortage of energy is the cause of economic sectors weakness. Energy and Economy both are interdependent. Our Government tried to uplift both sectors, unfortunately there was lack of consistency regarding provided economic and energy models. Lack of consistency was because of political instability. Pakistan introduced other way to produce energy ~~like~~ as wind air process, that coal and solar light. But to develop more these process ~~we~~ government don't have skillful people and technological machines. So Pakistan need to work over skillful people and buy the technology and develop these sectors. Through this act energy will grow more than need and we can ~~sup~~ sell this to neighbouring countries.
