

Despite its urgency, Climate Crisis remains the most neglected Cause

OUTLINE

1: Introduction

Thesis statement: In Contemporary period, climate crisis is worsening condition, but still it is neglected. Lack of Management from the various systems is a major Reason for the neglect of climate crisis. Proper systems are required to avoid the neglect of climate crisis.

2: Why climate - Crisis is remain the most neglected Cause

3: Reasons of climate Crisis became neglected Cause

a: Lack of the Management by UN Environment Programme

b: Failure of National and International organizations

c: Nation's prefer their National interest instead of focus on climate crisis

d: Development of Economic Crisis on worldwide

e: Having No enough Resource

f: Lack of Knowledge in Industrial Practice

4: Impacts of neglect of climate crisis

a: Disasters are occurring on worldwide

Date: _____

- b: Occurance of Global warming
- c: Scorching Heatwaves in cold regions
- d: Melting of Glaciers in cold regions
- e: Flood due to Heavy Monsoon
- f: Loss of Biodiversity
- g: Challenge of food security

5: How to Overcome the neglect of
Climate Crisis

- a: Organizations need to focus on
Climate Criteria
- b: Decreasing the use of Chloro-
fluoro Carbon
- c: Investment in renewable energy
resources
- d: Through Media and Seminars
awareness should be promoted
in public

6: Conclusion

Essay

"One day the Prophet (PBUH) Passed by Saad Ibn Abi Waqqas (RA) while he was performing ablution. The Prophet (PBUH) asked Saad "what is this wastage", Saad replied: "is there is a wastage in ablution also". The Prophet (PBUH) said: "Yes, even if you are at following river"; (Hadith)

This hadith gives the lesson, that there is No neglect for anything which comes under the umbrella of Nature. But at Present, Lack of Proper management system is devolving around everywhere in the world. Even we can say there is major role of failure of National and International organization is also a responsible for neglect of Climate Crisis. Every Nation prefer their National interest instead of focus on Climate Crisis. Development of economic Crisis on worldwide is also become a Cause of neglect of Climate Crisis. Due to having No enough resource and lack of knowledge in industrial practice is Reason for this neglect of Climate Crisis. Also. Because of lack of knowledge in industrial practice and Having No enough resource, disasters are are Occuring in everywhere on worldwide. Disasters causing Severe Global warming which become a Cause of Scorching heatwaves in Cold region. Due to

Heatwaves, melting of Glaciers are occurring in cold region. Glaciers are melting and its water is coming in river in high rate, then due to heavy Monsoon flood is occurring in everywhere. Flood causing loss of Biodiversity. Lack of Biodiversity enhance the food security challenge on global level. In contemporary period, Climate Crisis is worsening condition, but still it is neglected. Lack of management from the various system is a major cause for the neglect of Climate Crisis. For the betterment of climate proper systems are required to ~~the~~ ^{avoid} neglect ~~the~~ of Climate Crisis.

Maintenance of Climate is one of the most essential duty of every Nation. But at present, lack of attention towards the Climate has become one of the worse situation for every nation. Though Nations neglect this phenomenon instead of give focus to its urgency. Climate Crisis is become one of the reasons of disasters on worldwide. According to **World Meteorological Organization Report**, More than **2M** people lost their lives due to extreme weather and climate related events in the last five decades, with over **90%** of reported deaths worldwide occurring in developing countries, **11,778** disasters reported in between (1970-2021). Currently, the world has an

option to work on atmosphere. Basically it should be nature based option "Planting of tree" and raising of forest, and enhance the practice of industries to avoid the neglect of climate crisis.

There are many reasons which become neglected cause of climate crisis among them the most important is lack of management by UN environment programme. UN gave their main focus on other issues in the world rather than climate crisis. UN major focus is on disputes among the nations, health conditions, economic crisis in all over the world which neglect the climate crisis. In 2023, lack of management by UN environment programme, due to this rising temperature, put marine life and coastal ecosystem at risk of irreversible loss. 70 to 90% coral reefs will vanish on +1.5°C; (UN Environment Programme Report, 2023). Therefore it's become reason for neglect of climate crisis.

As like, UN environment programme, failure of National and other International organization are also responsible for neglect of climate crisis. Mainly National organization due to lack of resources give no focus towards climate crisis, other international organizations mostly prefer their own duties. Like in Pakistan and other developing countries National organizations mostly deal

with economic and political crisis rather than climate crisis, and other international organizations mostly show no attention towards climate. The failure of focus of National and international organizations became cause of neglect of climate crisis.

Rather than, failure of National and international organizations, some Nations also prefer their National interest instead of environment. To protect their National interest Nations first give attention to their own choice. like America to protect their National interest gave major attention to their own choice instead of climate crisis. In interview, Donald Trump said "I am not a Big believer of in Global warming;"

(CNN Interview, January, 2017). In an other interview he also said climate change is just a myth Not Reality. Therefore, the preference of National interest of nations became a cause of neglect of climate crisis.

Moreover, National interest, development of economic crisis on worldwide became also a reason of neglect of climate crisis. Every nation is busy to resolve their economy crisis especially developing countries, instead of climate crisis. Many countries on worldwide i.e Pakistan, Sri Lanka, and other developing countries which have extreme economic crisis, they all are trying to resolve their own crisis instead of climate

that way they all are neglected the Climate Crisis. In 2022, flood was occur in Pakistan, but also on that time there were extreme economic crisis in Pakistan, then Pakistan gave their attention to economic crisis. Development of economic crisis in developing nations is a reason of neglect of climate.

Lack of economic crisis in any nation become a reason for having no enough resource in the nation to handle the climate. Thus it become cause of neglect of climate crisis. When the country is suffering from economic crisis then automatically there would be no enough resources to handle the climate crisis. In every year due to lack of resource, when monsoon is occur, then Pakistan face heavy flood.

50 Peoples and 8 children have died and landsliding triggered by Heavy Monsoon;

(Dawn Report, July, 2023). Lack of having no enough resource become a cause of neglect of climate crisis.

When in Nations there would be no enough resource to deal with situations, then automatically there would be a lack of knowledge in industrial practices become a cause of neglect of climate crisis. For workers in industries due to lack of resource, they are become unable to get more knowledge which cause neglect of climate crisis.

In many industries when workers are unable to get more knowledge, then they are unable to deal with industrial practices. It became a reason of neglect of climate crisis. Because industrial work is directly related to environment i.e. Pollution etc. All are become reason of neglect of climate crisis.

The neglect of climate crisis causes many impacts among them the one is happening of disasters on worldwide. Lack of focus towards maintenance of climate is become reason of extreme disasters on everywhere in the world. ~~In contemporary period~~ On worldwide there are so many everywhere disasters happened due to which infrastructure was damaged. Extreme weather disasters kill 2M in 50 years, \$4.3T economic loss completely; (World Meteorological organization Report, 2021). Therefore, it become a cause of neglect of climate crisis.

Disasters causing severe global warming on worldwide. Global warming main reason is lack of attention towards the environment. Due to lack of use of trees in urban areas global warming is occur in many regions. Europe as well as Asia faced severe global warming in this summer, just because of neglect of climate crisis. July 2023 is projected to be the hottest month in

"hundred" if no thousands of years";

[NASA Climatology "Gravin Schmidt" Report, July, 2023).

Global warming caused by a scorching heatwaves in cold regions especially in "Europe". The reason of this is neglect of environment instead of its urgency which lead to climate crisis and cause extreme heatwave in cold regions. Record breaking heat batter US, Europe, China summer has just began in the Northern hemisphere but a brutal heatwave is already gripping parts of Europe, China and US. In 2023, heatwave in Europe became more frequent and more intense. The risk from heatwave are higher for elderly, pregnant women, children, people with pre-existing ^{health} condition and low income groups. Therefore, neglect of climate crisis become reason of heatwaves in cold region.

Heatwaves in cold region because cause of melting of glaciers in cold region on worldwide. The reason behind melting of glaciers is extreme heatwave in cold region which is only due to neglect of climate instead of its urgency. In this summer many regions in the world where glaciers are melt just because of extreme heatwave. In 2023, Europe Alps with a record melt; UN report, April, 2023. This is all because of neglect of climate crisis.

Melting of glaciers enhance the water rate in rivers when Monsoon is occur due to heavy monsoon flood. It occurring. Reason of this is because due to melting of glaciers water rate is increasing in rivers which become a cause of flood. In 2022, in Pakistan, India and in many other countries heavy flood was occurred due to which severe loss was occur.

Pakistan flood 2022, Damage 13,000+ People injured, 1400+ Death reported; (FAO, PARC reports 2022)

Extreme flood in Pakistan as well as other region in the world cause severe loss of Biodiversity. Flood totally destroy the biodiversity in many regions. In 2022, in Balochistan, and Sindh, and Punjab due to flood which cause a severe loss of biodiversity in these areas especially in rural areas destroy the complete crops and livestock. In 2022, Country has lost several species in recent past and is about to loss others; (World wide fund for Nature, December, 2022)

Loss of Biodiversity and other cause become reason of challenge of food security on world wide. Many reasons are responsible for the challenge of food security i.e floods, Global warming etc. In last one year in many areas of the world mostly in Asia due to

extreme floods, challenge for food security enhance. This is because of neglect of climate crisis. In 2022, due to floods heavy monsoon in many areas of Pakistan faced the extreme challenge of food security, which causes severe loss in all over the country. Many people tolerate malnutrition just because of lack of food. Therefore it is only due to neglect of climate crisis instead of its urgency.

Steps are taken to overcome the neglect of climate crisis among them the one is organizations need to focus on climate change. Because organizations have capacity and they are the great source to tackle the neglect of climate crisis. Recently many organization especially environment based organization start the special work on environment to fastly cover the neglect of climate crisis. We tackle the climate crisis on a variety of fronts: encouraging the transition to low and zero carbon emissions in key sectors such as energy, agriculture, building, forestry, industry and transport; (UN Environment Programme Reports, 2022) Therefore, these are the steps through which overcome the neglect of climate crisis.

Along with focus of organization we also need to decrease the use of chloro fluoro carbon. Extreme use of chloro fluoro carbon is a major reason of

worsening the environment. Due to extreme use severe pollution is occur in everywhere. Chloro fluoro Carbon (CFCs) since 1996 destroy the world ozone layer. The depletion of ozone layer will have a negative impact on the earth biodiversity. Excessive radiation striking the earth outlayer will obliterate total efficiency and even flora. It can even cause people to get skin cancer. To avoid these severe conditions and neglect of climate crisis we need to reduce the use of chloro fluoro carbons.

To reduce the use of chloro fluoro carbon along with this Nations need to do investments in renewable energy sources. Because renewable energy is energy produced from sources like the sun and wind that are naturally replenished and do not run out. To invest on renewable energy resources that it would not become a worse for environment. June 2021, the cumulative investment (foreign and domestic) in renewables amounted \$4.79 billion, of which \$786M was on solar, \$3,753M in wind and \$258M in biomass. Therefore, to overcome the neglect of climate crisis it is necessary to do investments on renewable energy resources.

Investments on renewable energy resources along with this, it is necessary to promote awareness in public through media and

Seminars to avoid the neglect of Climate Crisis Awareness is the only way which develops positivity in public then they get knowledge to overcome the neglect of Climate Crisis. To support the people through seminars and media and initiate awareness among them is necessary to neglect Climate Crisis. The International Conference on Climate Resilient Pakistan, co-hosted by the Government of Pakistan and the United Nations, took place on 9 January 2023. The Conference brought together Governments, leaders from public and private sectors and civil society to support the Government of Pakistan after the devastating flood of 2022; (UNDP, January, 2023)

In summation, the picture of climate change seems to paint a bleak future for mankind, however, it is a false impression. By acting out the suggested remedies, mankind can surely overcome climate change, by reducing its negative effects for the better future of coming generations. Use of different remedies through which neglect of climate crisis is possible. Like different organizations need to focus on climate criteria for betterment of the future. Also, reduce the use of chloro-fluoro carbon and investment on renewable energy resources are the good steps to tackle the neglect of climate crisis. Through media and seminars awareness

Date:

Should be promoted in public because this is a necessary step to tackle the neglect of climate crisis. Every country need to reduce the excessive use of CO₂ (Carbon dioxide). Carbon dioxide is a reason of enhancement of pollution. So all these steps are taken to avoid the neglect of climate crisis.

"It is never too late to pledge for a new change to create a new tomorrow. Where there is a will there is always a way, regardless of the obstacles and hindrance we can definitely achieve our goals."
