

Every passing day, world is becoming change due to advance in technology. As the world is getting more and more connected and reliant on technology, it is playing an important role in shaping the world and influencing events. This is why technology is referred to as a silent factor in international relations. This emerging technology determines international relations at different levels. At the political level, technology serves national interests, helps in making foreign policy, use in nuclear technology and other weapons and engages the international community. Similarly, at the social level, use of technology empowers women, plays a role in sustainable development, reduces greenhouse gas emissions and social media is used to organize public opinion. Likewise, technology enhances economic development. It has brought industrial development, research and evaluation in different fields, globalized the economy of the world, advanced transportation etc. So, technology is bringing numerous positive changes in the world. It allows the world for greater cooperation in international affairs, it is the platform of cooperation, diplomacy and dialogue, technology promotes successful trade policies among countries and now the world is becoming a global village. So, in this way, the emerging technology and its use is considered as a silent factor in international relations.

Topic

Technology as a Silent factor in International Relation

Outline

1. Introduction
2. Thesis statement
3. How emerging Technology determine international relation
3. Technology enhance political development at global level
 - (a) Technology as means to serve national interest
 - (b) Use in making foreign policy
 - (c) Impact on global governance
 - (d) Use in Nuclear technology and other weapons
 - (e) International Community engagement
4. Technology strengthens social development
 - (a) Addressing the sustainable development
 - (b) Reduce greenhouse gas emission
 - (c) Empowering women
 - (d) Social media use to organize public opinion/protest
 - (e) Exchange of culture by the use of Technology
5. Economic development by using emerging Technology
 - (a) Technology brought industrial revolution
 - (b) Modernization in Agriculture
 - (c) Research and innovation in different fields
 - (d) Globalization of economic
 - (e) Advance in Transportation
6. Effect of Technology in International relation
 - (a) World become global village
 - (b) Allow for greater cooperation in international affairs.
 - (c) Platform of diplomacy and dialogue
 - (d) Industrial progress
 - (e) Promote successful trade policies
7. Conclusion
