

PROS OF IDLENESS

Wrongdoings in this world are a result of exaggerated importance of work and a wrong conception of idleness. People who are misdirected have contributed more negatively than the ones who remain idle. The credit of today's chaotic state goes to the lack of necessary gaps and pauses rather than non-rewarding continuous work. Historically, misdirected energy and the constant need to be productive has brought considerable damage via state personnels. Many tragedies could have been averted if the people in charge would have taken their due time off instead of contributing mindlessly to the state matters. Removing the taboo associated with laziness will bring out better results. The groups and conferences that choose this way compromise their work quality.
