

Ques:

(A) Industrial Revolution brought significant changes to the environment. Discuss (10) mks

(B) Give a brief account on Stockholm declaration (10) mks

① Introduction:

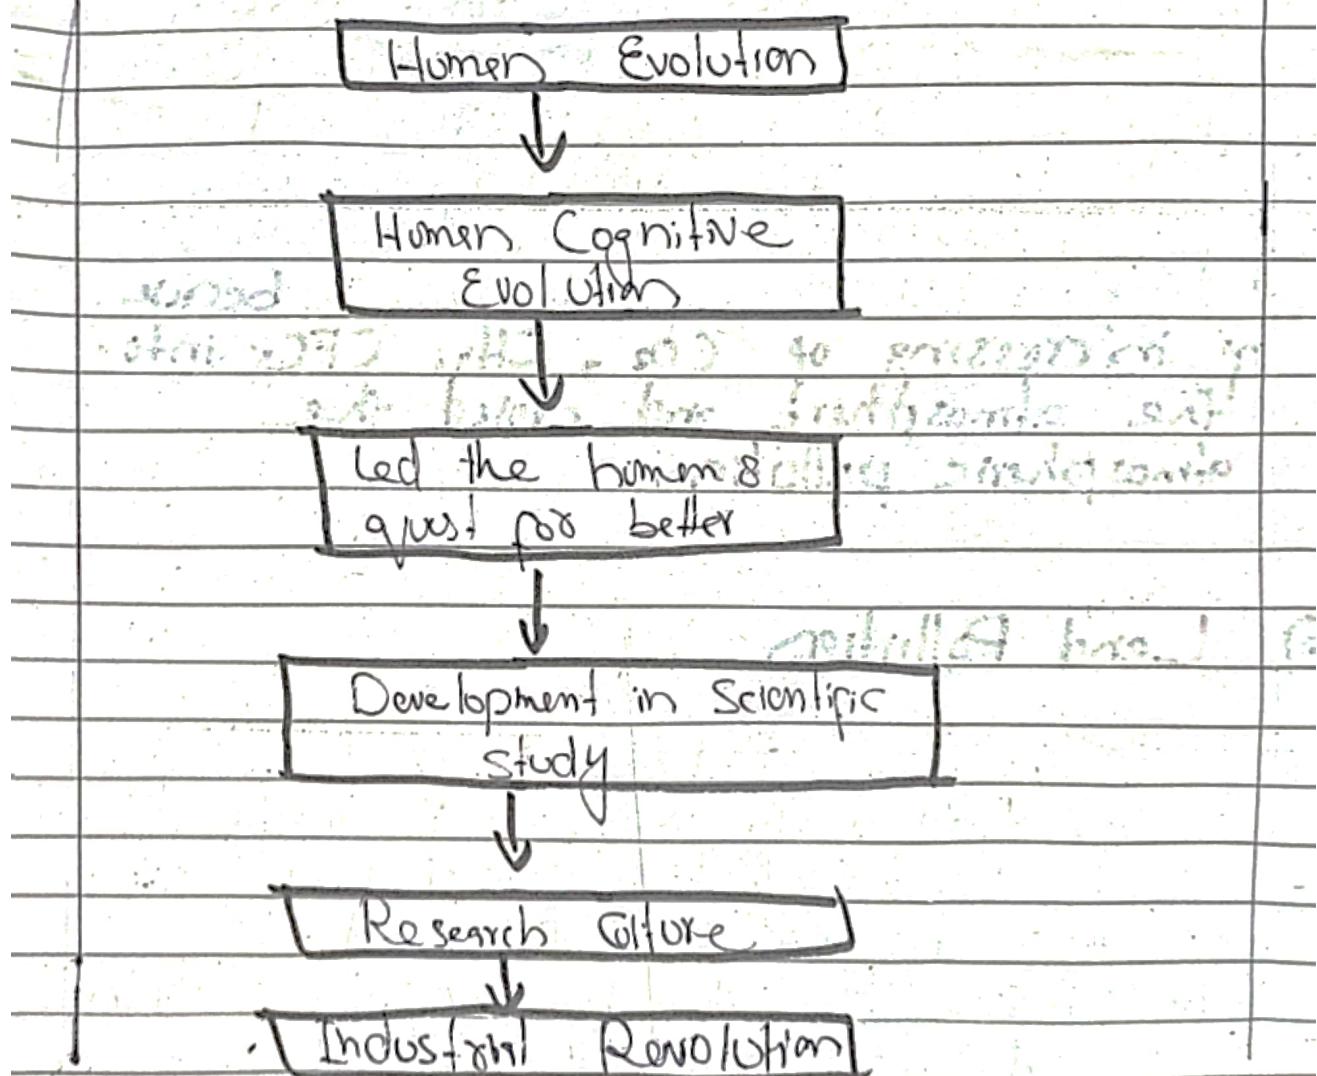

Industrial revolution is considered as a benchmark in the intellectual evolution of the mankind. However, despite being a benchmark, it has brought significant negative changes to the environment. That can not be understood without being thoroughly understanding the industrial revolution. Moreover, the current environmental problems, from the atmospheric pollution to global warming are the result of industrial revolution.

② Understanding the concept of Industrial Revolution

Since the formation of the universe 1.5 billions years ago, the whole universe is evolving with each passing time, and the residents of that universe are also evolving. In short, the human living in the milky way witnessed the evolution from biological evolution to the cognitive evolution. The later evolution motivated the humans to innovate new things. Owing to that innovative

The humans created mechanics, which turned the whole system of production and enabled the industrial revolution. In other words, industrial revolution changed the mode of production of goods. The humans who were solely dependent upon agriculture were now able to depend upon the industrial sector. As per research, by 1970s half of people in England were employed by industries.

② Highlighting the factors that led the Industrial revolution

② Changes to environment brought by the industrial revolution

The industrial revolution brought many significant changes to the environment as it has not altered the natural equilibrium of the environment and some of them are given below. As a result of which the following problems are faced by humans.

① Atmospheric Pollution

The planet Earth is surrounded by its natural atmosphere that contains different gases in it. For example, Carbon dioxide is 0.2%, Oxygen, 21% and Nitrogen is 78%. However, because of Industrial revolution, the basic equilibrium changed of atmosphere because of increasing of CO_2 , CH_4 , CFCs into the atmosphere and caused the atmospheric pollution.

② Land Pollution

The pollution is also brought by the industrial revolution. As mentioned above, the infiltration of industrial pollutants into the atmosphere resulted and the chemical reaction with the existing existing chemical molecules in the atmosphere.

That resulted in the acid rain. Owing to pouring of Acid rain it also deteriorate the land and caused the Land pollution.

③ Depletion of Ozone Layer

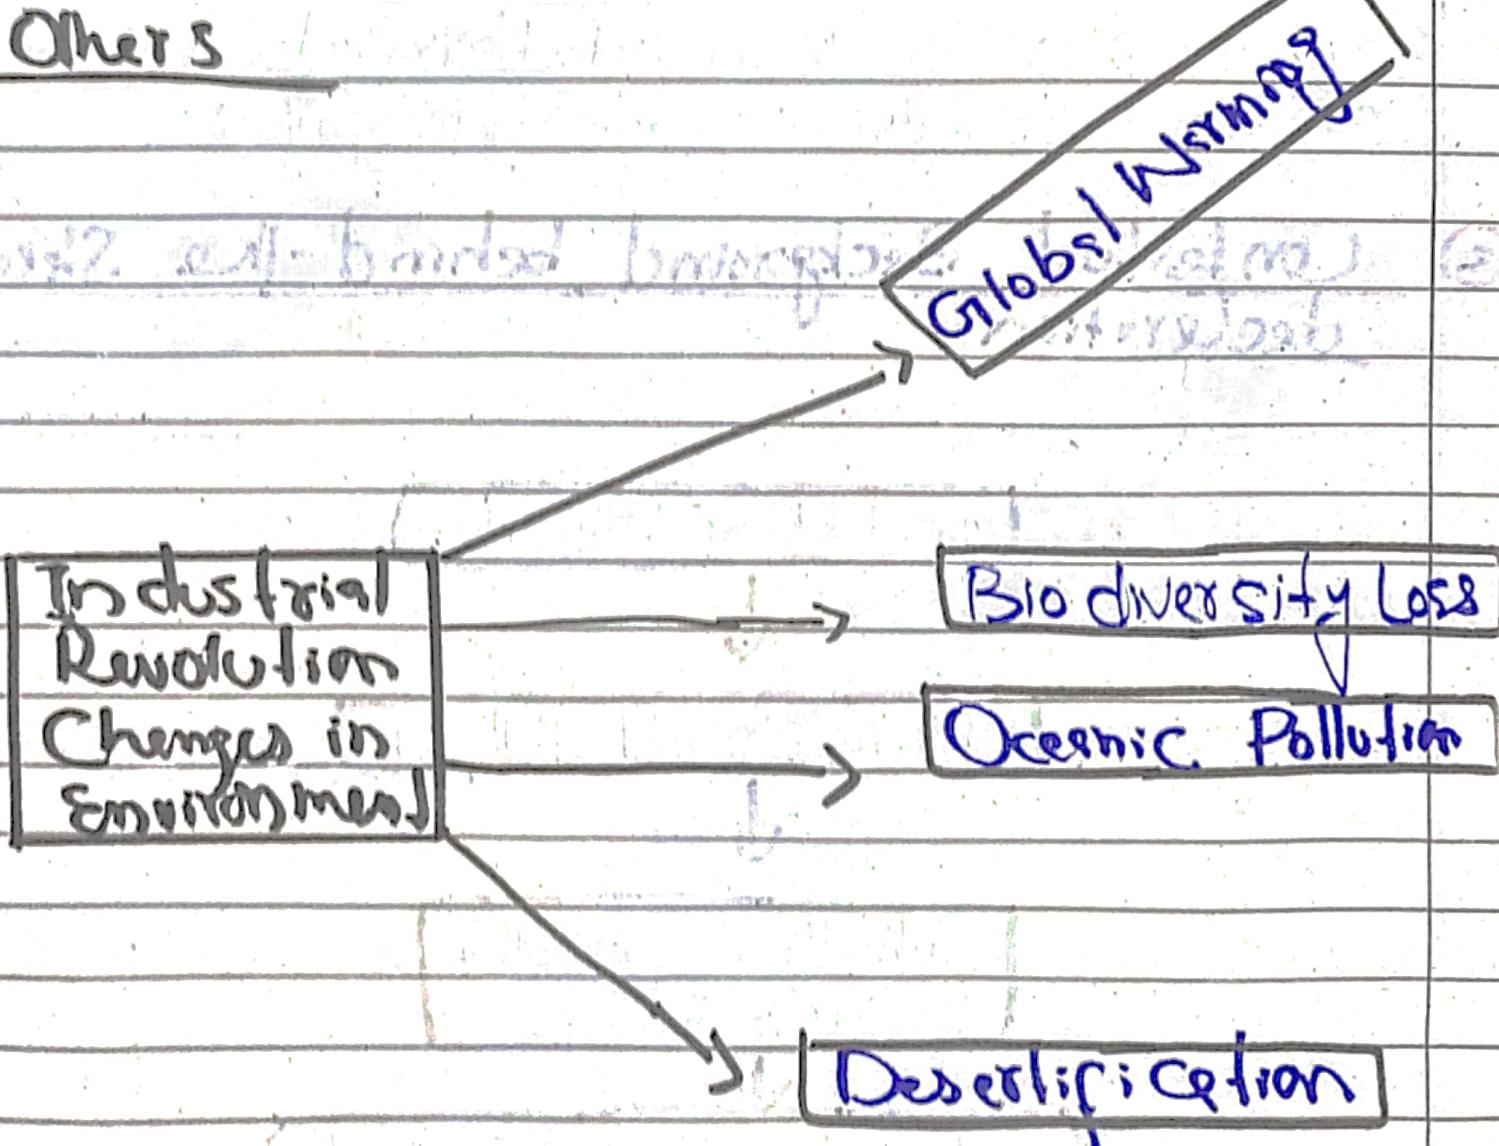

One of the biggest change in the atmosphere triggered by the industrial revolution now is the depletion of Ozone layer. In year 1970-1973 the scientist found a hole in the Ozone layer near the Antarctica and Atlantic region. While research they found that, the release of CFCs in the atmosphere has reacted with the O_3 and cause a big hole.

④ Climate Change

The industrial revolution has brought the climate change with itself. As, due to massive industrialization and its other forms of combustion e.g. formation of metallic roads, deforestation caused the climate change in 1952 (e.g. London Smog 1952 and floods in Pakistan, Volcanic eruption in 2003, cold winds in USA 2001).

Environment

Others

Conclusion

The industrial revolution brought many significant changes in environment. For example, the ozone layer depletion, atmospheric pollution (air pollution), global warming, climate change, water pollution are all the result of the industrial revolution. However, in order to understand the industrial revolution holistically one must understand from its background.

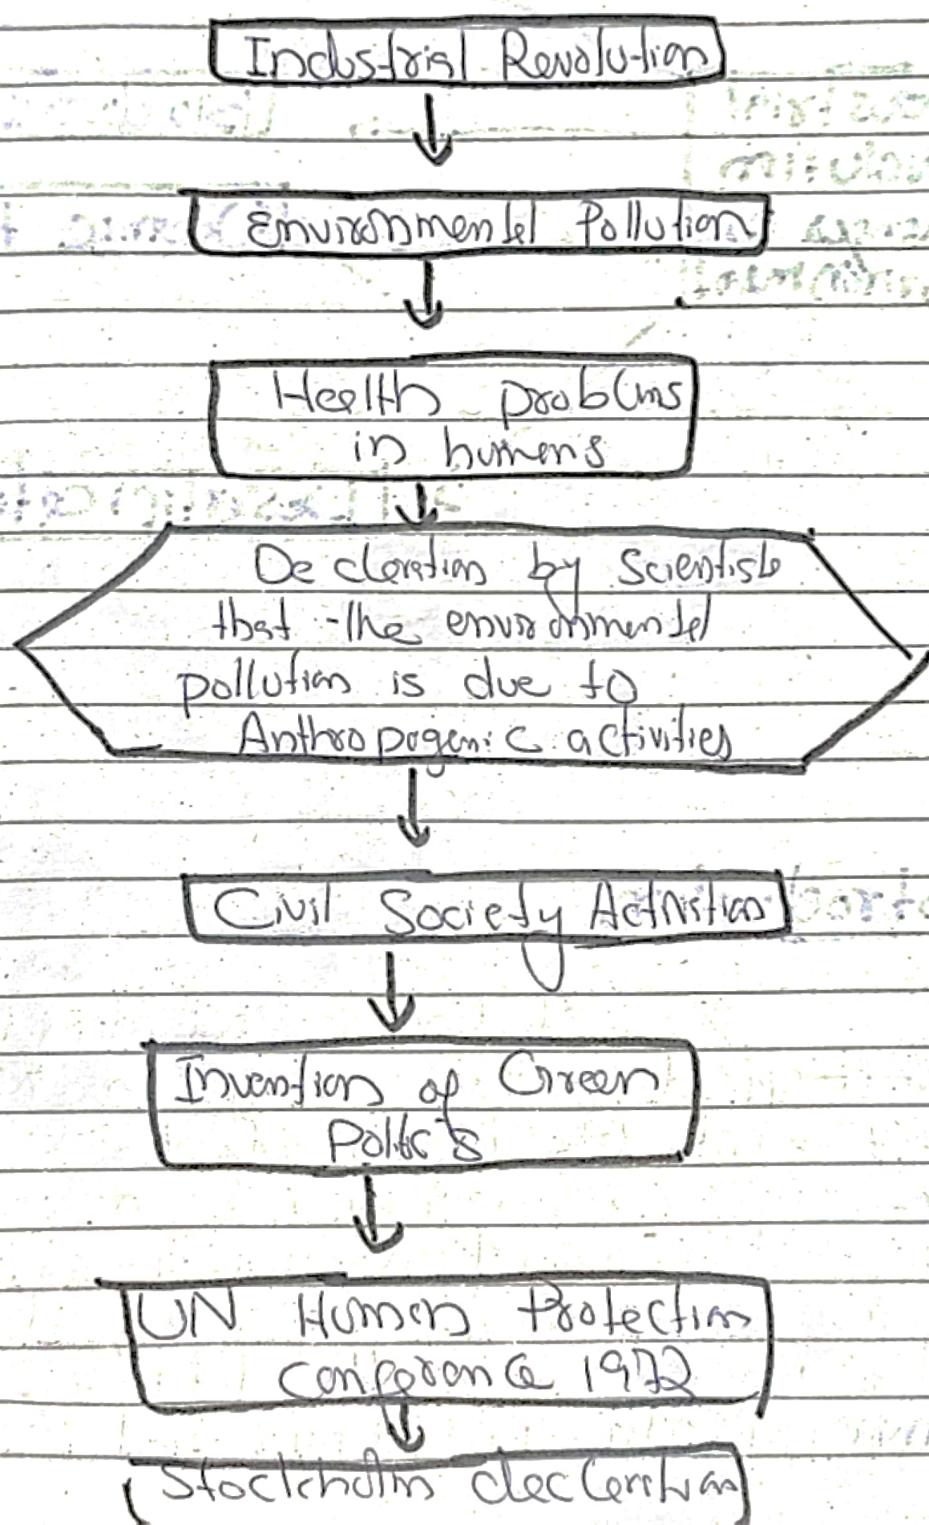

B

① Introduction

The Stockholm declaration was a result of the changes in the environment due to industrial revolution. The unprecedented changes in the environment altered the civil society and resulted in the Stockholm declaration that ended in the United Nations Environmental protection and the

principles of the Stockholm Declaration
for the member countries to follow.

③ Contextual Background behind the Stockholm Declaration

③ An over look on the United Nations Human Environment Protection Conference 1972

It was initiated by the United Nations in 1972 for the purpose of environmental protection. It was attended by all the member states and more than hundred non state actors joined it. It was ended in the declaration of Stockholm principles and formation of UNEP.

④ Brief account on Principles of Stockholm declaration

The the Stockholm declaration a big list of principles was given that served as a guiding principles for the member countries to deal with the environmental challenges. Some of them are given below

- i) Human Rights must be protected
- ii) Earth's capacity must be protected
- iii) Non-Renewable energy resources

- must be protected
- iv Oceanic pollution must be prevented
- v Solutions for the conflicts must be by dialogues and on reasonable terms
- vi Nuclear weapons production must be prevented
- vii Development projects must not hamper the environment
- viii Environment concerns must not hamper the development
- ix An integrated institution for development and environment must be created
- x National environmental policies must be devised
- xi The trade between the developing countries to developed countries must be exempted from tax
- xii Policies for the atmospheric pollution must be devised

Conclusion

The Stockholm declaration was
-the effect of the environmental pollution.
It alerted the scientific and civil
society for the environmental protection.
It resulted in the policies and
principles for the environment.
In short, -the Stockholm declaration set
precedent for the environmental laws.
