(Body paragraph).

Climate change and Pakistan:

Pakistan has been in trouble owing to climate change. In Pakistan, climate change has created heavy rainfall, searing heatwaves, hunger, and flash flood. Thus, Pakistan has severely affected despite contributing under 1pc of global greenhouse gas emissions. Some areas of Pakistan are being affected by searing heatwaves, such as Jacobabad and Multan, whereas some places are being damaged by brutal floods, such as Balochistan, Sindh and KP. Furthermore, owing to climate change, hunger rate of Pakistan has risen.

According to Global Hunger Index, Pakistan is ranked 99th out of 121 countries. Hence, climate change has severely affected Pakistan.
