Topic: Mankind faces the Challenges of using Artificial Intellegence Responsibily

1 Outline

1 Introduction

   Thesis statement

2 Chru Paragrah

3 **Responsible use of AI in various field.**

   (a) Data privacy is one responsible of the resp challenge for AI

   (b) Responsible use of AI in Military is a challenge.

   (c) Gender baisness is a responsible challenge for AI.

   (d) Human values in a society and the role of AI

   (e) Responsible use of AI and idustry.

   (7) Responsible use of AI is a massive challenge for ācaш acquiring jobs.

4 **Impact of irresponsible use of AI in the present world:**

   (a) Use of artificial intellegence in Russia Ukrain conflict.

   (b) Frauds in various industry.

(c) Emergence of cybercrime, proves fatal for society.

(d) Impact on the loss of human decisions making.

(e) The threat of unemployment is increasing.

5 **Future impacts of Arititicial Intellegence.**

(a) emergence of robotic world free from human emotions - (securit

(b) Loss of human values and integration of society

(c) Economic problems creates more problems

(d) Environment impact of artificial intellegence and society.

(e) Emergence of insecure world.

6 **How to combat artificial intellegence weaknesses:**

(a) Alogirthm selection for artificial intellegence

(b) Check and accountability in artificial intellegence

(c) Techniques like k-enonymity to secure sesitive data.

I **Conclusion:**

Introduction Paragraph.

As J. Robert Oppenheimer invented the first atom he did not aware about its drastic impact in the present world. His atomic bomb was able to destroy only one or two small city. Nowdays an atom destroy the whole country. Every country wants to acquire it. Firstly it was 1. used for 1 energy production now it is used for the defense. Nowadays atom is not only the weapon for fighting artifical intellegence becomes a great weapon for war. It is more dangerous than atomic bomb. It enters into the life of individual people through the help of devices. It helps to conceal private data. It becomes a great challenge for everyone who belongs to various field. that how he use it. As It helps a detector to conceal data, military can use for good or lethal purposes. Whether AI promotes gender biasness or not and whether It has human values and industry can use it for good purposes or not. These various fields has a big challege for the use of

AI for good purposes or bad. The current situation of the world shows the impact of the world as the Russia and Ukrain conflict is not taking at end because of the use of AI. Aritificial intellogence also promoted various crimes like fraud in industrial level, cyber security threat and unemployment. It also impact on human activeness. The future of the world with the artificial intellegence technology shows that the world will fill with robot without having emotions, less of human values, economic problems raises more problems environmental impact and emergence of insecure world. Alogrith selection, check and balance over data and various technology can control the artificial intellegence. It is bone as well as bane but if we use it with various amend-ments then it will prove more beneficial in the world. So it is challenge for humans that they use for good or bad purposes.
