

Paragraph:

Deforestation is the major cause of Global Warming:

Date: _____

One of the major causes of global warming is the rampant cutting down of forests leading to deforestation. The process of deforestation has not evolved recently but it is the result of removing forests for infrastructural development. Forests play crucial role in maintaining the balance between environmental gases as plants intake carbon and release oxygen. ~~then~~ This is the reason that due to deforestation the amount of green house gases like carbon dioxide has increased and has ultimately ~~can~~ exacerbated the phenomenon of global warming.
