

AI and Mankind

Outline

1. Introduction

Thesis Statement: AI is an acronym of Artificial Intelligence, which means human tasks are performed by the machines. Thus, from education to health, it facilitates mankind, it also has some demerits, including decrease in unemployment rate. However, by devising certain policies, its cons can be reduced.

2. Correlation between AI and mankind

3. Advantages of AI to mankind

- a) Prediction of natural disasters
- b) Detection of fraudulent activities
- c) Ease in communication
- d) Ease in travelling
- e) Ease in education
- f) Increase in health facilities
- g) No issue of company for elders

4. Disadvantages of AI to mankind

- a) Increase in environmental issues
- b) Humans are under surveillance
- c) Increase in unemployment rate
- d) Likelihood of accidents
- e) Errors in healthcare
- f) Issue of misdiagnosis

5. Recommendations to outweigh AI's disadvantages

- a) Development of ethical AI
- b) Provision of representative data
- c) Collaboration between AI and humans
- d) Continuous monitoring of AI

6. Conclusion
