

# Human Inventions Move Societies backwards

## Outline:

### 1. Introduction

Thesis statement: While human inventions are not entirely detached from blame of dragging societies backwards, it is human "intention" that is in essence at fault: for the same ~~one~~ <sup>few</sup> grams of Uranium can put hand of Sapiens' clock behind by centuries or propel the same civilization forward as a source of clean energy.

### 2. Scope of human inventions beyond technological extravagance.

### 3. Ingenuity of humans has led to expansion of human civilization and ensured its success as a species: (Thesis)

- a. Escape from Malthusian trap: modern agricultural techniques breaking myth of limited sustainability of human population on Earth.
- b. Invention of wheel carrying the weight of early civilizations
- c. First building-block of human

Society: construct of MONEY as a means of exchange

- d. The second building block: invention and evolution of the concept of GOVERNANCE
- e. Strides in medical development reducing mortality rate
- f. Playground of genetic engineering breathing new life in human progress
- g. Age of space exploration
- h. Technological development of global communication infrastructure.

4. Human inventions have inevitably created bottlenecks that threaten to render ~~it~~ human society vulnerable at best and annihilate it outright at worst: (Anti-thesis)

- a. Invention of explosives blowing shields of human progress
- b. Air bombers and tiger tanks: souls of German doctrine of blitzkrieg during the Second World War
- c. Environmental degradation caused by ~~in~~ unabashed industrialization
- d. Ever widening economic gap between the Global North and the Global South.
- e. Developing regime of hybrid warfare.

5. Barring few drawbacks, human inventions have hitherto propelled human progress towards prominence: (Synthesis)

- a. Development of artificial intelligence
- b. Use of Atomic bombs as equalizers of power imbalance
- c. Human civilization originated with inventions and has since ~~steadily~~ progressed steadily.
- d. Evolution of a global community of humans from hunter-gatherers, now gearing towards becoming inter-planetary species.

6. Conclusion

Essay:
