

In these days, the advancement in radar system is ~~also~~ a military adventurism. ^A Lot of research and money is required for high tech radars. These radars are used for ^{surveillance} surveillance purpose on borders. The money that ~~is spent~~ on human development is currently used in manufacturing of radars. The important factor of military adventurism is to maintain its hegemony. Currently, more investment on tracking because one country when ^{hacks} hacked the operating system of its foe country, then how other country ^{can} fight against ^{it} him. Now coming towards the impacts of military adventurism on the environment. First, the ^{fossil} fossil fuels that military ^{uses} is used for operating of equipment ^{produce} produce lot gases that damage the upper layer of atmosphere. Due to burning, the GHGs are increasing which ^{is} a danger for the environment. According to IPCC, burning of fossil fuel is the main reason for climate change which is danger for environment. Climate is greatly affected by burning of fossil fuels. The heat that is produced by the use of atomic bomb is very dangerous for the environment. During atomic bomb testing lot of heat is produced, which completely destroys the ecosystem of that area. It destroys the land, air and infrastructure. Due to this heat, the temperature of that area is increased upto extreme level and as a result, no life is possible at that place. Atomic bomb testing causes ^{great} greatly impact on environment. The radiations that are produced by the radars are greatly damage the birds. Due to these radiation, their sensing power is decreased. The impact of military adventurism on sea life is very dangerous. Due to explosion in sea, the sea animals ^{can} ~~could~~ not survive and ^{die} ~~resulted in death~~. To overcome these issues, firstly, transformation from fossil fuel to sustainable energy ^{is} ~~required~~ ^{needed}. Secondly, completely ban on atomic bomb testing. ^{Subject of the sentence is missing} Thirdly, prohibit the manufacturing of biological weapons ^{diplomacy} and effective diplomacy is required to stop the deterrence between countries. Earth is beautiful and due to ^{man} wish, it becomes hell for many human and also becomes good place for some human.

Paragraph 2

Military adventurism ^{is} a threat to the environment. Military means power, ^{affect} But its expansion causes many problems that not only face the nation but the whole world. ^{let us discuss how...} Firstly, ^{manufacturing more weapons} how military adventurism is expanded in these days. Race of weapon manufacturing due to balance of power is main reason. Many countries like Pakistan and India, South Korea and North Korea, US and Russia and many more countries are in this race. To overcome the enemy, every country tries to make more weapons which promotes the adventurism of military. According to UN ^{watchdog} Pakistan has more than 146 Nuclear weapons and India has 143 Nuclear weapons. And this race is continuous. So, military adventurism is due to deterrence between countries. Secondly, the joint forces drill in sea and at land ^{also come under the} ^{ambit} relationship and power to its foe country. Due to Taiwan issue, US and Taiwan perform many drills in sea which gives message to China against its aggression. And as a result of this, China ^{are} also performs many drills in South-China sea. So, Joint forces drill ^{are} also ~~come in~~ military adventurism. Military adventurism is also due to manufacturing of biological weapons. Many countries are still manufacturing biological and mass destruction weapons. Israel, is currently working in this field. Although, ^{yet} other countries are also involve in this process. ^{target} But not all countries admitted that they are involve in manufacturing of biological weapons. The jet-industry is one of the major part of military adventurism. US, China and Russia are in this race. These countries ^{are} continuously manufacturing the advanced jets. ^{take} These jets not ~~only~~ ^{target} targets the enemy-land but also takes atomic bombs with it. F-25 is currently a best example. Due to military adventurism, countries spend lot of money and set dearth of budget for social works and development.
