

Energy Crisis in Pakistan

This is ^{the} most growing issue in ^{the} country. Since the ^{independence} of Pakistan, our government could not overcome ~~at~~ this problem. There are several reasons behind this failure, like political instability, changing ~~in~~ economical models again and again and major one is making of Energy from oil. As you know Pakistan imports oil which ^{an} is expensive source of energy. So country can not resolve this problem till now. Shortage of energy is the cause ^{weakening of} of economic sectors ~~weakness~~. Energy and Economy both are ^{interdependent} interdependent. Our ^g Government tried to uplift both sectors, unfortunately there was lack of ^{consistency} consistency regarding provided economic and energy models. Lack of consistency was because of political instability. Pakistan introduced other ^{ways} ways to produce energy ~~like~~ as wind air process, ~~that~~ coal and solar light. But ^{does not} to develop more these process ~~we~~ government don't have skillful people and technological machines. So Pakistan ^{needs} need to work over ^{skilled} skilled people and buy the technology and develop these sectors. Through this act energy will grow more than need and we can ~~sup~~ sell this to neighbouring ^{to} countries.
