

Mashaal

Sub-heading: Education: a measure of intelligence in our society

Topic Sentence: Education is taken as a measure to check the intelligence of students in our society.

Explanatory Sentence: Our education system as well as society focus more on the grades of students and only those students are considered intelligent who secure high grades in examination.

Supporting Point: While, those students who fail to achieve good grades in examination are labelled as unintelligent. This is the reason why students focus more on cramming and memorisation and less on intellectual understanding.

Example: The key difference between education and intelligence is that

Another perspective of topic is that education is not just the degrees or skill aka the self / informal learning is taken as intelligence

education is the process of facilitating learning, attainment of skills, attitudes, values, and habits using methods like teaching and discussions, whereas intelligence is the capacity for learning, acquisition, planning, creativity, critical thinking, and problem solving (Difference Between.Com, what is the difference between Education and intelligence, February 2022).

Concluding Sentence: [Therefore, education if taken as a measure of intelligence affects intellectual abilities of students]

do not add a new idea in conclusion ← irrelevant
