Spread of different diseases due to floods.

confusing

Topic Sentence: ~~The long-term impact of short-term catastrophic floods results in the spread of different diseases.~~

Reason / Explanation: The ~~aftermath~~ of floods ^{are} followed by the transmission of water-borne and vector-borne diseases such as malaria, dengue, cholera, scabies and other skin diseases.

Main argument: The reason being ~~the~~ poor sanitation and contamination surrounding the flood-hit areas. The stagnant water serves as a breeding ground for the mosquitos - making the access of basic drinking water an ordeal.

Almost synonymous

Evidence: According to the ^{WHO} ~~UN~~ report, the severe health risks associated ^{with} flooding ^{are} the contamination of water sources, leading to an increased risk of infections through direct ingestion or ^{with} direct contact of water.

Concluding statement: Therefore, the spread of different diseases ~~affect~~ ^{disrupt} the health ^{SP} of already disrupted flood affecteds.
