Topic: Mankind faces the Challenges of using Artificial Intelligence Responsibility

4 Outline

1 Introduction

Thesis statement

2 Chro Paragraph **Crunch**

3 **Responsible use of AI in various fields**

(a) Data privacy is one of the <sup>responsible</sup> resp challenge for AI

(b) Responsible use of AI in Military is a challenge  $\rightarrow$  how?

(c) Gender biasness is a responsible challenge for AI.  $\rightarrow$  how

(d) Human values in a society and the role of AI  $\rightarrow$  clarify

(e) Responsible use of AI and industry. SP

(f) Responsible use of AI is a massive challenge for acqui - acquiring jobs. ?

4 **Impact of irresponsible use of AI in the present world:**

(a) Use of artificial intelligence in Russia - Ukrain conflict.

(b) Frauds in various industries

similar to part "b"

(c) Emergence of cybercrime. proves fatal for society.

(d) Impact on the loss of human decisions making.

(e) The threat of unemployment is increasing.

### 5 Future impacts of Artificial Intelligence.

(a) emergence of robotic world free from human emotions. (security)

(b) Loss of human values and integration of society

(c) Economic problems creates more problems

(d) Environment impact of artificial intelligence and society. — clarify

(e) Emergence of insecure world.

### 6 How to ~~combat~~ <sup>ensure using</sup> artificial intelligence ~~weaknesses:~~ responsibly

(a) Algorithm selection for artificial intelligence

(b) Check and accountability of artificial intelligence

(c) Techniques like anonymity to secure sensitive data.

### 7 Conclusion:

most of the are generic and vague — Improve by writing body paragraphs.   
 ~~subheading~~ ~~express~~ ~~body paragraphs~~

Too long hook without a mention of Introduction Paragraph

AI

When

J. Robert Oppenheimer invented the first atom, he was not aware about its drastic impact in the present world. His atomic bomb was able to destroy only one or two small cities. Nowadays an atom bomb can destroy the whole country. Every country wants to acquire it. Firstly it was used for energy production now it is used for the defense. Nowadays atom is not only the weapon for fighting artificial intelligence becomes a great weapon for war. It is more dangerous than atomic bomb. It enters into the life of individual people through the help of devices. It helps to conceal private data. It becomes a great challenge for everyone who belongs to various field. That how he uses it. As it helps a detector to conceal data; military can use for good or lethal purposes. Whether AI promotes gender biasness or not and whether it has human values and industry can use it for good purposes or not. These various fields have a big challenge for the use of

AI for good purposes or bad. The current situation of the world shows the impact of the world as the Russia and Ukraine conflict is not taking at end because of the use of AI. Artificial intelligence<sup>SP</sup> also promoted various crimes like fraud in industrial level, cyber security threat and unemployment. It also impact<sup>S</sup> on human activeness. The future of the world with the artificial intelligence technology shows that the world will be filled with robot without having emotions, loss of human values, economic problems<sup>?</sup> raises more problems environmental impact and emergence of insecure world. Algorithm<sup>SP</sup> selection, check and balance over data and various technology can control the artificial intelligence. It is boon as well as bane but if we use it with various amendments then it will prove more beneficial in the world. So it is a challenge for humans that they use for good or bad purposes.
