"Despite its urgency climate crisis remains the most neglected cause"

Outline

This is my first complete essay. Kindly check as thoroughly as possible because if mistakes are not identified and corrected at the beginning become habits. So, my humble request is strict checking and recommendations.

this part of topic is ignored

(1) Introduction:

Same structure as topic

Despite its urgency climate crisis remains the most neglected cause. This is because at global, national and individual level the issue is not prioritized and highlighted as much as it could be. When all these stakeholders will start to work at all levels, then the grave ~~issue~~ issue of the world can be put into spot light and will be eventually addressed. (Thesis statement?)

Should

(2) How climate crisis is <sup>the</sup> most neglected cause. ~~is not~~ the summary of topic

(3) Being <sup>a</sup> serious issue, the climate crisis is neglected due to following reasons:

(a) Deadlock to address the issue due to environment politics. - clarify

(b) Expensive transition from non-renewable energy to renewable energy

(c) <sup>The lack</sup> of INGO authority and infrastructure

to address the issue.

- (d) Unfriendly environmental policies of World power Trump has detrimentally affected the cause
- (e) Pursuits of climate crisis by people and unawareness about gravity of issue. → clarify
- (f) Complex nature of climate crisis itself make it the neglected cause. → clarify
- (g) Weak global governance and international law as a cause to this neglected issue.

4) Implication of keeping climate crisis neglected for long time.

- (a) Gravity of <sup>the</sup> issue is increasing due its snowball effect.
- (b) Increase in induced migration.
- (c) Erosion of biodiversity at faster pace.
- (d) More frequent natural disasters.
- (e) Melting of ice from glaciers and sudden rise of new diseases from them. ✓
- (f) detrimental effects on already challenged global economy.

5) The way forward to change the neglected cause into main global concern.

- (a) Development of political will of big power to address the climate crisis. → how?
- (b) Reparation from carbon emitters to invest in renewable energy → recommend mechanism

Relate it to "urgency" of issue and discuss after crunch

- SP
- (c) Giving legitimacy and infrastructure to INGO for highlighting, policy making and implementation for climate crisis.
- (d) USA, as a global leader, take issue seriously → How?
- (e) Public awareness campaigns to educate people and break the climate myths. ✓
- (f) More vigorous research studies to understand complex nature of the issue. ✓
- (g) Stringent global governance as a tool for policy frame to highlight the cause. ✓

Conclusion

Despite its urgency climate crisis remains the most neglected cause

The planet earth has suffered many challenges, but climate change is unprecedented challenge. If this challenge is not addressed, there are bare minimum chances that this planet may observe even another challenge. Having <sup>Being</sup>

<sup>paradox</sup> most pressing and urgent, the climate crisis is the most neglected cause. (To address this issue there are many challenges that need to be addressed at first place.) However, all the stakeholder <sup>↳</sup>

ignore it due to many reasons. The climate crisis has become part of environmental politics, there is need of finance to transfer renewable infra-structure to non-renewable infra-structure, all the world leaders are focusing <sup>more</sup> on national interests than global interests, unawareness about gravity of issue and climate crisis myths, and weak global governance and international law. These all challenges <sup>away</sup> shift global leader from climate crisis.

Due to this ignorance the world is witnessing drastic changes. These

Date:

changes have induced migration, erosion of biodiversity at faster pace, more frequent natural disasters, melting of ice, stress on global political economy. As the time is slipping from hands the deterimental effects are increasing their pace.

The need of the hour is that all the political leadership make political will to address this crisis, there can be the mechanism of reparation which can be used to transfer infra-structure

from renewable to non-renewable, the initiation of public awareness campaigns and establishment of stringent global governance system can highlight the issue and direct towards solutions. As this (climate

crisis) is most pressing issue but at individual, national, level the issue is not prioritised and highlighted as much as it should. <sup>be</sup> When all the stakeholders

will start to work all all the level, the the grave issue of world can <sup>be</sup> put into spot light and will be eventually addressed.

Date:

Having many implications on earth, the climate crisis is neglected. All the stakeholders are <sup>not</sup> paying due attention and efforts this cause needs to be eliminated.

This cause needs strong policy framework, unfortunately, the Paris Agreement and Kyoto protocols are not implemented, even by the global leader state.

There is need of massive finance but none of the countries is willing to pay this, States are required to change the patterns of industrialization and cut carbon emissions but none is ready to transform. As a result, the climate crisis is getting worse.

According to IPPP the global temperature has risen to  $0.8^{\circ}\text{C}$  and this is going to increase more  $3-4^{\circ}\text{C}$  in 2050 to make this planet inhabitable.

In nutshell, the climate crisis is bringing world on verge of collapse, however, global leader is ignoring it.

These are many reasons for which the most important cause is neglected.

The environmental politics is on top among them. All the industrial states have to cut carbon emission. They are not cutting it because to cut carbon emission they have

Date: \_\_\_\_\_

reduce carbon foot-prints by slowing down the industrialization. The slowing down of industrialization means shrinking the size of economy. For this no country is ready. The world leading state ~~are~~ in trade competition and they don't want environment politics they speed breakers in development. According to UNFCC, Climate Report, China, USA, India and EU produce 35%, 15%, 9% and 9% carbon respectively. The carbon emission is directly proportional to industrial growth. In conclusion, the climate crisis is amidst real politics verge which inhabit global attention on climate crisis.

The climate crisis is neglected because it needs huge finance to shift global infrastructure from renewable energy to non-renewable energy. This is global-co-ordinated effort where all the states agree to slow down their industries as the required finance is pulled into energy transition. International Energy Agency ~~opines~~ that this energy transition process cost more than 1 trillion. Now States are not

Date: \_\_\_\_\_

ready to pay this amount. As a result, the climate crisis remains the most neglected cause. The absence of finance fading away the political will to address this cause immediately.

The climate crisis is a global challenge. This needs a proactive international agency which bring the issue into mainstream discussion. Unfortunately, UN has proved to inactive entity due to lack of funds and political will of nation-state.

The UNO has mandate to bring all the member state on the board but due to its limitation, it has compelled the member state to proactive and significant legislation.

The weak legislation in the domestic affairs of states is allowing state to produce carbon emission. Although, Antonio Guterres, SG of UN, has declared Climate Emergency however, it has not materialized.

Thus, lack of UN jurisdiction in domestic affairs of state UNO has not proved to agency to highlight the issue in more pressing way.

The global leader play important role to bring issues into limelight. The USA president, Donald Trump clasped/

When?

# Revisé present indefinite tense

Date: \_\_\_\_\_

blurred the issue more. In 2016, the Trump pulled out USA from Paris Agreement. This decision had significant impact on global environmental cause. The policy of great power influence the world. For Example, in 1914, USA did not join the League of Nation, As a result, LON failed in its mandate. Similarly, Trump decision to withdraw from Paris Agreement drastically affected global efforts to cut carbon. One may say that Trump policies of environment stretched back global efforts and showed world that climate crisis is insignificant cause.

The awareness about any issue is the most paramount. The climate crisis suffers from unawareness and many myths. There are groups in global South and global North that propagate myths, such as there is nothing like global warming, climate change and endanger to world. This ~~fade~~ away the struggles of climate activists. Many people start to people that definitely there is nothing like global climate crisis. These propagation

fades

Date: \_\_\_\_\_

of false opinion harm the cause. In conclusion, the propagandas against climate crisis over-shadows the global environmentalist efforts to highlight the concern.

The <sup>complex</sup> nature of climate crisis itself making ~~it~~ it difficult to resolve. Do scientists know all about climate crisis? No!. According to IPCC, the scientists are still evaluating the impacts, pace, and solutions of the crisis. Everyday carbon is adding into atmosphere and sea and changing the dynamics. So, scientists are only assuming, not giving confident forecasts. Besides the calculating carbon increasement, the scientist are facing to measure its impact on the plannment. As this planet consists many different spheres, so it is difficult to study all the environmental implication on them. In this way, the complex nature of problem has deprived scientist to study it and come to conclusions for policy and decision making.

The neglect to climate crisis has huge cost. The world has started to witness increased indused migration.

Date:

Grammatical  
mistakes

The habitats <sup>of animals</sup> are becoming inhabitable and inhospitable. The different species of many animals are abandoning their original habits and migrating. In this forced and unnatural migration animals are losing their lives as well. For example, when deer migrated the caps that no difficulty, but now the water levels in the rivers is high to ice melting due to global warming, this result drowning of caps and many deaths. Not only animals bears cost of climate change but also humans are migrating as well. According to World Bank, the 216 million will be displaced from six regions by 2050 due to climate crisis. Conclusively, the ignorance to climate crisis is inducing forced migration.

The climate crisis and global climate change has endangered many species and eliminating biodiversity.

The eti Dolphin activist, Juniors Zulfqar Ali Bhatto has highlighted on his official twitter account that the indigenous Indus Dolphin is on verge of extinction. The climate crisis is endangering many species. The sea animals and fresh water animals are also facing problems.

Date: \_\_\_\_\_

The coral reefs, a great source of biodiversity, are dying and fresh water fishes are also dying. The reason is that  $\text{CO}_2$  quantity in the water is increasing that creates respiration problems for living/aquatic animals. Not only respiration is impaired but also water temperature has risen. The change in water temperature affects "homeostasis" (regulation of body temperature). In short, the climate crisis has endangered many living things and harmed biodiversity.

Today, dated 17-8-2023, Hawaii, a state of USA, is facing unprecedented wild fire in USA modern history (CNN)

Every year Pakistan is facing enduring floods. The last, Pakistan boreed 30 billion dollars loss (Pakistan Bureau of statistics) in floods. Not only these both countries

are facing natural disaster induced by climate crisis, but also across the globe many natural disasters are engulfing the lives. The climate crisis has caused

many natural disasters. These crisis are triggered by global warming. Whenever, the trees are rubbing each other causing fire due friction. These fires are

strengthened by dry leaves and grass made by global warming. As a result,

Date: \_\_\_\_\_

many forest are under the curse of fire. In this way, climate crisis has catalyzed many natural disasters.

The story of climate crisis ~~never ends here~~ <sup>does not</sup>. The climate crisis has melted <sup>ice from</sup> massive mountains. As people know that carbon dio-oxide <sup>(CO<sub>2</sub>)</sup> has

increased global temperature because <sup>(CO<sub>2</sub>)</sup> has <sup>the</sup> capacity to trap temperature. The trapped temperature increased global temperature. The increase in global temperature melts ice from mountains.

According to United Nations Framework for <sup>(climate change)</sup>, the Himalayan glaciers are melting at faster pace <sup>than ever</sup> ~~than history~~. The melting of temperature ice causes floods in the countries,

rise in sea levels. The increased sea level submerged many cities on the coast. According to many report the Karachi's  $\frac{1}{3}$  will be under water by 2050.

This means that melting of ice from glaciers due to climate crisis has caused many problems for world.

The last but not least effect of climate crisis is its <sup>harmful</sup> effect on global economy. The climate crisis

Date: \_\_\_\_\_

has induced migration, natural disasters, and many more which have repercussions of economies of world. The world needs <sup>one</sup> trillion dollars to transist? from renewable energy to non-renewable energy. To study the crisis there is need of investment in research and development (R&D). Already after COVID-19 and Ukraine-Russia war has weakened global economy and now the financial burden of climate change negatively impacting the global economy. Thus, the looming natural disasters and other monetary losses due to climate crisis have challenged the global political economy.

Where there is will there is a way. Although, the climate crisis is complex and controversial which is not highlighted, yet there are many possible way forwards to resolved it.

The first solution to this crisis is manding? the political will of leaders. They should acknowledge the urgency of climate crisis and come forward to highlight it more than that they are doing now. They can make political

Date:

will be dismantling the environmental policies. By dismantling the environmental policies there would be ease to policy making and decision making regarding industrialization and carbon elimination. The consensus will not allow politician to change industrial infrastructure towards environment friendly not an environmentally hostile. The global politicians can use UNO for this purpose where they sit together and formulate uniform policies. In nutshell, environmental policies can be discouraged by building political will.

The international intergovernmental organizations <sup>such as</sup> can play their role to highlight the issue and influencing domestic policy framework for states.

- If the UNO is given broad scope to influence domestic policies, it can bring states for legislation where states highlight urgency of climate crisis. Although this idea is against concept of sovereignty yet international allows intervention on environmental grounds. Thus, strengthened the IGNO can help to highlight the issue as to resolve it.

Date: \_\_\_\_\_

As ~~an~~ unawareness and climate myths are challenges to highlight the concern of climate. The international community, states and individual should ~~campaigns~~ more to raise the global environmental awareness and shatter the myths. Today, Social media is best platform for this purpose. The hyperactive campaigns/campaigns on social media by international agencies and states can hit the audiences to make more learnt on environmental affairs. Thus, the use of social media for awareness can limelight the issue.

At this time to tackle the climate crisis there is need to monetary assistance which can be gained through climate reparation. The climate criminals should pay reparations to climate victims. In this way, the money that is required for energy transition, climate natural disaster catastrophes can be supplemented. This will help victims to recover and criminals to be punished. As a result, climate crisis be part of mainstream problem at international court of Justice. ✓

In conclusion, the reparation is a solid way forward to highlight the issue at ICJ.

The reparation process will need a strong global governance super-structure. Not only reparation demands the stringent global governance system but also every aspect of this crisis demands. An international global governance can play more crucial role to surface the issue. The UNFCCC can be used in this effort. The UNFCCC has mandate to observe the climate crisis. If UNFCCC widen its role for accountability of carbon emitter, transparency in climate finance, efficiency of agency, then this cause can be addressed in a better way. No doubt, UNFCCC is doing its efforts but urgency of issue demands more and more. In this way global governance can surface the issue and lead to eventual solution.

In summation one can say that the world is in complete grip of climate crisis and its effects. As Greta Thunberg says: "The climate crisis is the crisis of next generation". The implications of problem are obviously experienced by world

leave a blank line b/w paras

but as scientists are predicating the implications would be severe. For example, the melting of ice would increase, biodiversity fade away at faster pace, already suffering, economies will suffer more. The causes of these dangerous effects are lack of political will of politicians over environment issues, lack of monetary funds for energy transition, global leaders pursuit of nation interest than global interest. If the mentioned solutions are ~~emplye~~ employed; then world can be saved and ~~the~~ we can be highlighted. The mentioned solutions are mending of political will, reparations, on environment culprits and strong governance. There is always a ray of hope. If the international, national and individual attention is diverted towards climate crisis, then the matter can be resolved. Where there is hope, there is way.
