

Pollution due to Urbanization

Urbanization, while making significant progress and development, has brought about a concerning rise in pollution. As cities expand to accommodate the growing population, various anthropogenic activities contribute to environmental degradation. Such as Air pollution which is emission of pollutants from vehicles and industries. Water pollution is another critical issue as urban generate a vast amount of wastewater. Urbanization also contributed to noise pollution. Addressing these issues require sustainable urban planning, efficient waste management and adoption of cleaner technology to reduce environmental impact of rapid urbanization.
