CSS PART PAPER 2020:-

TOPIC:- IS PAKISTAN READY FOR DIGITAL REVOLUTION?

→ OUTLINE:-

1. Introduction

Thesis statement: There are certain things that should be done and kept in mind, but, still, Pakistan is ready for digital revolution. Due to certain initiatives and the inclination of youth towards digitalization makes Pakistan ready for revolution. By proper implementation of initiatives, the risks associated with it is going to be minimized.

2. Why digital revolution is important for Pakistan

3. How Pakistan is ready for digital revolution (Thesis)

a) Pakistan has the second largest technology lover's youth in the world.

b) Pakistan has invested in digitalization with the support of China

c) Pakistan is stepping into e-Governance after the introduction of certain initiatives

d) Increase in digitalization in various sectors of Pakistan during COVID-19 has paved the way for digitalization

e) ~~The exponential~~ Pakistan is also experiencing the exponential rise of virtual startup programs

4. Despite initiation, it still seems impossible that Pakistan can get digitalized (Antithesis)

a) Not all of the Pakistan's youth is passionate, literate, and has technological access

b) Pakistan could not afford digitalization for longer due to economic and political instability

c) Despite the initiatives, Pakistan still lags behind in e-Governance as compared to other countries

d) Increase in digitalization during COVID-19 has brought many challenges as well

e) The current economic crisis and risks involved in startup can lead to a disaster in the country

5. Nothing is impossible for believers (Synthesis)

a) Government has initiated online courses and has expanded the laptop scheme

b) Digitalization brings economic prosperity in country and is independent of politics

c) Any initiative takes a time to become effective

d) The advantages of digitalization surpasses the disadvantages

e) Proper implementation of startups has proved to be a game changer for countries

6. Conclusion

→ INTRODUCTION:-

"Everyone here has the sense that right now is one of those moments when we are influencing the future." This quote of Steve Jobs is applicable to the current status of digital revolution in Pakistan. Just like other countries in the world, Pakistan is also trying to be digitalized. This is the moment for Pakistan to influence its future and to step into the digitalized world. Although there are certain things that should be done and kept in mind, but Pakistan is ready for digital revolution. Due to certain initiatives and the inclination of youth towards digitalization makes Pakistan ready for revolution. By proper implementation of initiatives, the risks associated with it is going to be minimized. Pakistan

is ready for digital revolution due to its passionate youth, investment in digitalization, introduction of e-Governance system and the rise of digitalized sectors and virtual startup programs. But, the critics argue that due to ^{digital} illiteracy, lack of technological access to youth, and political and economic instability in Pakistan, the dream of digitalization is impossible. Moreover, they also argue that the notion that Pakistan still lags behind in e-Governance and the challenges and risks associated with startups are averting the attention of people and government from digitalization. These arguments are useless because the counter strategies taken by Pakistan such as the provision of education and technological access to youth and proper implementation of startups are bringing the dream of digitalization in Pakistan towards possibility/reality.
