# Is Pakistan ready for digital revolution?

Outline

## 1. Introduction

The question whether Pakistan is ready for digital revolution or not is debatable. Some analysts argue that it is as ready as neighbouring China who got independence after four years of the independence of Pakistan. However, Pakistan is not yet sufficiently equipped with the pre-requisites of digital revolution.

## 2. A brief overview of Digitalization:

### 3. Pakistan is less likely avail of Digital Revolution. (Thesis)

- Insufficient digital infrastructure
- Lack of political will
- Absence of skilled-back education
- Economic constraints to educated-youth
- Lack of technical support by the government.

### 4. Digital Revolution can be capitalized in Pakistan (Anti-Thesis)

- Freelancing platforms have materialized successfully
- Revolutions often take place amid doorman governmental performance
- STEAM programs are at peak in Pakistan
- Regional alliance can be used to help literate-youth
- National security policy (2022-2026) is

DATE: \_\_\_/\_\_\_/\_\_\_

centered around human-resource

5. Challenges in the way of Digital revolution outweigh its potential in Pakistan (Synthesis)

- a. E-commerce has only benefitted those with robust access to digital-gadgets
- b. Digital revolution requires visionary leadership which Pakistan lacks
- c. Ninety % of rural education is deprived of STEAM ventures
- d. Enmity with regional-technical giant India can not be ignored
- e. Regime-changes pave way for policy discontinuity

6. Conclusion

Topic:

Is Pakistan ready for digital revolution?

## (Argumentative) Essay Introduction

"Every journey in the world starts with the first-step." Although, this quote illustrates that for bigger achievements one has to take the first step, however, in the case of digital revolution in Pakistan it seems unfit. Pakistan's progressive path had not always been bed of roses.

The question, whether Pakistan is ready for digital revolution or not is burning; some analysts argue that it is as ready as neighbouring China who got independence after four years of the independence of Pakistan. Notwithstanding, Pakistan is not yet fully equipped with the pre-requisites of digitalization.

In Pakistan, there are insufficient resources including poor digital infrastructure and lack of skilled human-resource. Moreover, absence of political will has further impeded digital revolution. In spite of many initiatives taken in the field of digitalization such as streamlining digital literacy the country is far behind the actual revolution. This is because of the wide gap between

rural and urban centers set-up and weak foreign Policy etc.

Crunch

Digitalization can be defined in a number of ways. It refers to altering traditional infrastructure of something into an online infrastructure via machines, internet and computers. Digital revolution on the other hand, is a term that explain how things change with the changing trends in the world of virtual phenomenon. Many countries have revolutionized information technology fields such as India has shifted its manual records of land to online data storage which has been automatized through Artificial intelligence. Moreover, in Pakistani schools and colleges, teachers attendance has been transformed from manual signature to face-recognition machine. All these computer backed changes are known as digital revolution.
