Energy Crisis in Pakistan

Caught between a rock and a hard ^{place}, Pakistan grapples with energy crisis. Energy is essential for a country development as industry development and business development. We are facing energy crisis, huge dependency on non-renewable energy sources instead of renewable energy sources. Pakistan produced 64% energy from non-renewable sources as gas, oil and coal. Other reason private company for energy production in which Pakistan has to pay million dollars in IPP to these company every year. Pakistan energy/electricity production increases from 33000 MW to 41000 MW, but unable to use 41000 MW energy properly. Energy should produced from renewable sources as ~~water~~ hydro and wind energy which are climate friendly sources and do not release carbon in climate. Energy crisis slow down the industries development, business activities which ^{have} to lose increase unemployment and decrease economy of country. We are using gas and oil for factories and auto-mobiles, which cause the release of carbon in the air and increase the ~~pollution~~ ^{pollution}. The alternative sources is are solar energy, wind energy and bio-energy. Solar panel is best source for energy with at least zero carbon ~~con~~ consumption in environment. Pakistan Govt should take steps to tackle the issues of energy crisis through renewable energy sources.
