Examination 1973

Expanding Population And moral values

Some people are not sure that science prevent us from natural calamities. According to malthus, population grow more rapidly than production.

At present time, we are facing the problem of ever-expanding population. Although, we trust that humans have ability to cop with unusual problems.

Present generation is different from previous not only because of change in technology but also from masses of masses due to extensive education.

The acceptance of morality is important with progress of science for better life. That's why many people are sharing and exploring human values. But in the presence of forces seen by malthus, ~~can~~ we ^{are} able achieve human goals and moral development. On the basis of religious

faith, with science, we have a better chance to make favourable society and our survival.
