

Topic: Visionary decision-making happens at the intersection of intuition and logic

Outline

A. Introduction

B. What is the Relationship between Intuition and Logic

C. Intuition and Logic leads to Visionary Decision-making

1. Thomas Edison's mother's vision regarding his education
2. Steve Jobs's intuition and logical analysis in Apple's business strategy
3. Elon Musk's intuition and logic while building SpaceX and Tesla
4. Imran Khan's intuition of providing free medical care to cancer patients
5. Malala Yousafzai's intuition to give free education to girls
6. Abdul Sattar Edhi's intuition to help the underprivileged and needy
7. Asma Jahangir's intuition to provide social justice

8. Dr. Abdul Qadeer Khan's vision of making Pakistan a nuclear state

D. Conclusion

Essay

At the crossroads of innovation and strategic insight, visionary decision-making emerges as a powerful force, fueled by the dynamic interplay of intuition and logic. The intuition and logic always came as a result of some events or competitions, which leads toward visionary decision-making. Like the school letter from Thomas Edison's school to his mother ~~led~~ became a catalyst in making him a great scientist. Steve Jobs and Elon Musk choosed unique business strategies and decisions which made them the successful visionary businessmen's. Moreover, the tragedies in the life of Imran Khan and

Malala Yousafzai's life fueled them with intuition and logic to make a visionary decision to help humanity. Furthermore, we can see the life of a well-known social activist Abdul Sattar Edhi, who made every possible effort to help humanity. Visionary decisions not only helped humanity but also the nation's like the visionary decision of Dr. Abdul Qadeer Khan to make Pakistan a nuclear state. We have thousands of examples from our daily life which proves that intuition and logic led to visionary decision-making. There is always a intuition, which leads to the making of logic. Then, both intuition and logic intersect to fuel visionary decision-making, which makes the personalities great.

Intuitions and logics are often seen as a contrasting ways

reasoning. Intuition are actually the feelings, intention or willingness to do any work. It does not required any reason, or it does not begin with reason. As far as logic is concerned, it is the next step after intuition. Logic always required the reason to make any decision. Therefore, intuition and logic both intersect to make a visionary decision. It is difficult to believe that there exist a visionary decision without any logic and intuition. Both of these are the basic components of visionary decision-making.

In bridging the realms of intuition and logic, visionary decision emerges. The forthcoming paragraph will illustrate how intuition and logic led to visionary decisions.

Thomas Edison's mother's vision regarding his education is an

perfect example of how intuition and logic leads toward visionary decision-making. Edison was not an ordinary student due to which his school wrote a letter to his mother that he can not be teach. His mother had intuition that he has a potential due to which she decided to give him home schooling. As a result of his mother's strong visionary decision making ability, he turned to become the world greatest ever scientist. He would not become a scientist if his mother didn't have any intuition and logic. Therefore, an intuition and logic leads toward visionary decision-making.

futhermore, intuition and logic leads to visionary decision in business matter like that on Steve Jobs. He was the inventor of the most expensive phones selling company. He had the intuition that

what strategy can make consumers amaze and better than other competitors. He critically analyzed his business strategies and resulted in the invention of iPhones, iPads, iPods and many other products of Apple. It was his intuition and logic of conquering customer's heart which led him to make one of the largest companies in the world. Hence, intuition and logic leads to visionary decisions, which has the ability to change whole scenarios.

Moreover, it was intuition and logic, which led Elon Musk to launch SpaceX and Tesla despite having series of failures. Elon Musk had a intuition to make a car which contribute none to pollution. Therefore, he gave the concept of electric-car which totally utilizes electric energy. In addition, he didn't stop there. He had the intuition to launch

his own spacecraft to moon. Therefore, he launch his own private company SpaceX, and after 3 failures in a row he finally successfully launched the rocket to moon. Hence, Elon Musk is the perfect example that if you have strong intuition and logic, it will leads you to make a visionary decision.

Furthermore, Imran Khan's intuition of providing free medical care to cancer patients led him to make Shaukat Khanum Memorial Cancer Hospital. After the death his mother from a cureable cancer, he had the intuition to provide free medical care to all all cancer patients. Such an intuition and logic led him to make a cancer hospital in remembrance of his mother. He build the first cancer hospital in Lahore which give health facility

to thousands of people free of cost. Therefore, intuition and logic leads to visionary decision-making like that of Imran Khan.

In addition, Malala Yousufzai's intuition to give free education to all girls led her to win a Nobel prize is an perfect example visionary decision-making. Malala was shot in head in Swat by Taliban's. After that she was taken to Birmingham, UK where she was treated. After the treatment and rehab of two years she again spoke for girls education, and launched Malala Fund to facilitate girls education. Such an brave initiative led her to win the Nobel peace prize. It was all her intuition which led her to take steps for girls education despite having its negative circumstances on her life. Hence, it is always

intuition and logic which led to visionary decision-making.

Another personality whose intuition and logic led him to make a strong visionary decision was Abdul Sattar Edhi.

He had the intuition to help the underprivileged and needy. Therefore, it helped him to launch Edhi Foundation which not only worked at national level, but also on international platform. Without a strong intuition and logic he would not have been able to take such step. Hence, it was intuition and logic which led him to make a visionary decision of building a foundation which helped millions of people worldwide till now.

Moreover, it is intuition and logic which led to visionary decision like providing social justice

to oppressed. A famous lawyer named Asma Jahangir had the intuition to provide justice to oppressed. She took different initiatives in providing justice through number of human rights campaigns. Her intuition led her to make a visionary decision of formation of Human Rights Commission of Pakistan. This commission worked for human rights under the chairmanship of Asma Jahangir for long time until her death. Hence, it is intuition which led to taking a visionary decision.

Lastly, it was intuition and logic of Dr. Abdul Qadeer Khan which led him to make Pakistan a nuclear state. Dr. Abdul Qadeer Khan is a well-known personality in Pakistan's history. He had intuition to make Pakistan a nuclear state.

After the intersection of his logic of scientific knowledge, he made a visionary decision to take initiative. Due his vision, Pakistan became first **Muslim** country to have nuclear power. Therefore, it was his intuition and logic, which led him to make Pakistan a nuclear state.

In a nutshell, there is always a intuition, which leads to the making of logic. Then, both intuition and logic intersect to fuel visionary decision-making, which makes the personalities great. As discussed in essay, it is always both intuition and logic to make a visionary decision. If any one of them absent there, it would not complete the process. Like if there is intuition, but logic is absent then it will only remains the wish. It would be turn into visionary decision, and same

is the case in the absence of intuition. There are hundreds of personalities like Thomas Edison, Imran Khan, Malala Yousafzai who intersect their intuition and logic to make a strong visionary decision, which made a strong impact in their life. If any two of them had been absent, then maybe we would not be able to witness the greatness of their life. Hence, it is proved that it is always the intersection of intuition and logic, which led to make a visionary decision. As Napoleon Bonaparte said, "Nothing is more difficult, and therefore more precious, than to be able to decide."
