- (d)** The height of the Egyptian pyramid is 146.6 meters and a base length is 230.6 meters. Find the volume of that pyramid. (5)(20)

DAY: \_\_\_\_\_

## SECTION B

DATE: \_\_\_\_\_

Q6(a) charges for 1st minute of call = 0.50

" " rest of call = 0.11

Expression for call that last 'N' minutes

$$0.5 + 0.11 \times N = \text{Total charges}$$

(b) Missing number series.

i. 1, 8, 4, 27, 9, 64.

$$1^3 = 1$$

$$1 \div 1 = 1$$

$$2^3 = 8$$

$$8 \div 2 = 4$$

$$3^3 = 27$$

$$27 \div 3 = 9$$

$$4^3 = 64$$

ii. 3, 6, 8, 16, 18, 36.

$$3 \times 2 = 6$$

$$6 + 2 = 8$$

$$8 \times 2 = 16$$

$$16 + 2 = 18$$

$$18 \times 2 = 36$$

iii. 2, 8, 512, 134217728.

$$2^3 = 8$$

$$8^3 = 512$$

$$512^3 = 134217728$$

DAY: \_\_\_\_\_

$$81, 9, 64, 8, \underline{144}, 12$$

$$81 \div 9 = 9$$

$$64 \div 8 = 8$$

$$144 \div 12 = 12$$

$$6, 11, 21, 36, 56, \underline{81}$$

$$6 + 5 = 11$$

$$11 + 10 = 21$$

$$21 + 15 = 36$$

$$36 + 20 = 56$$

$$56 + 25 = 81$$

### Area From Perimeter.

Perimeter of rectangle =  $P = 114 \text{ cm}$

one side =  $(2x - 3) \text{ cm}$

other 3 sides are equal in a

rectangle i.e.

$$3x - y = 2xy$$

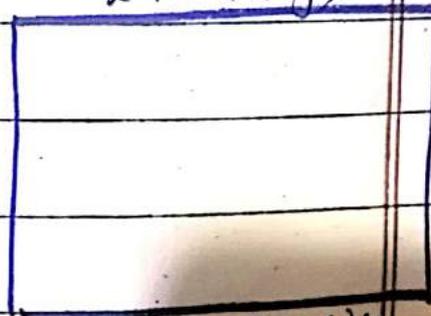

$$3x - 2x = y + y$$

$$x = 2y$$

so

$$P = 2l + 2b$$

$$l_1 = (3x - y) \text{ cm}$$

$$l_2 = (2x + y) \text{ cm}$$

DAY: \_\_\_\_\_

Perimeter of a rectangle is

$$P = 2l + 2b$$

$$114 = 2l + 2b$$

$$114 = 3x - y + 2x + y + 2(2x - 3)$$

$$114 = 3x - y + 2x + y + 4x - 6$$

$$114 = 9x - 6$$

$$\Rightarrow 9x - 6 = 114$$

$$9x = 114 - 6$$

$$\frac{9x}{9} = \frac{108}{9}$$

$$x = 12$$

As we know that parallel sides of a rectangle are equal hence

$$l_1 = l_2$$

$$3x - y = 2x + y$$

$$\text{as } x = 12$$

$$3 \times 12 - y = 2 \times 12 + y$$

$$36 - y = 24 + y$$

$$36 - 24 = y + y$$

$$12 = 2y$$

$$\Rightarrow y = \frac{12}{2} \Rightarrow y = 6$$

AY: \_\_\_\_\_

Now, finding values of breadth and length

$$\text{Breadth} = b = 2x - 3 = 2 \times 12 - 3 = 24 - 3$$

$$b = 21 \text{ cm}$$

$$\text{length} = l_1 = 3x - y = 3 \times 12 - 6 = 36 - 6$$

$$l_1 = 30 \text{ cm}$$

$$\text{length} = l_2 = 2x + y = 2 \times 12 + 6 = 24 + 6$$

$$l_2 = 30 \text{ cm}$$

$$\text{so } l_1 = l_2 = l = 30 \text{ cm}$$

$$\text{Area of Rectangle} = l \times b$$

$$= 30 \times 21$$

$$\text{Area} = 630 \text{ cm}^2$$

### LENGTH OF SHADOW

According to given

condition, two triangles

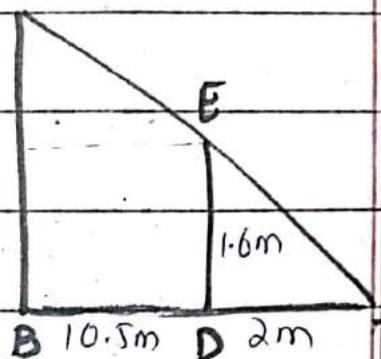

i.e.  $\triangle ABC$  &  $\triangle ADE$

are similar as per

Triangular theorem. So, their corresponding sides have an equal ratio i.e.

$$\frac{AD}{AB} = \frac{DE}{BC}$$

Now, putting values

DAY: \_\_\_\_\_

$$\frac{2}{(10.5+2)} = \frac{1.6}{BC}$$

$$\frac{2}{12.5} = \frac{1.6}{BC}$$

$$\Rightarrow BC = \frac{1.6 \times 12.5}{2} = \frac{200}{50} = 25.5$$

$$BC = 2 \times 5$$

$$BC = 10 \text{ m}$$

So, shadow casted by Ahmed on wall BC will be 10 m in length.

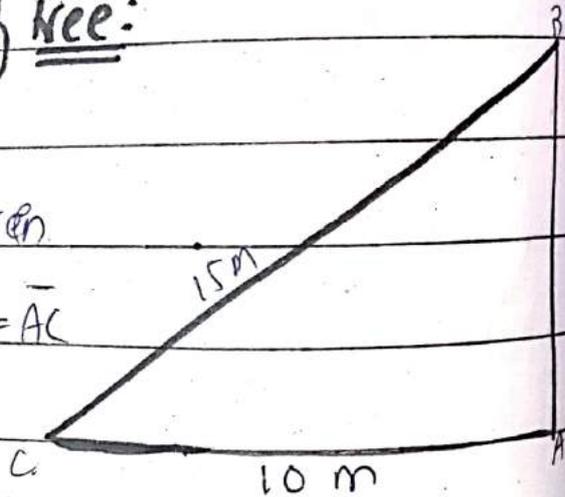

### Q7. Height of tree:

Given:

1- Distance between

Ali and tree =  $\overline{AC}$

= 10 m

2- Distance of Ali's eyes

from tree =  $\overline{BC} = 15 \text{ m}$

3- To find = ?

Height of tree =  $\overline{AB} = ?$

According to Pythagorean Theorem.

$$(\text{Hypotenuse})^2 = (\text{Base})^2 + (\text{Perpendicular})^2$$

i.e.

$$(\overline{AB})^2 = (\overline{AC})^2 + (\overline{AB})^2$$

putting values

$$(15)^2 = (10)^2 + (\overline{AB})^2$$

or

$$(\overline{AB})^2 = (15)^2 - (10)^2$$

$$(\overline{AB})^2 = 225 - 100$$

$$(\overline{AB})^2 = 125$$

Taking  $\sqrt{\quad}$  on both sides.

$$\sqrt{(\overline{AB})^2} = \sqrt{125}$$

$$\overline{AB} = 11.18 \text{ m}$$

so height of the tree is 11.18 m.

**LINES OF SYMMETRY.**

A line dividing the object into equal parts is known as a line of symmetry. It passes through the center of the object.

## NUMBER OF LINES OF SYMMETRY IN

### 1- HEXAGON:

A hexagon is a shape with 6 equal sides. i.e.

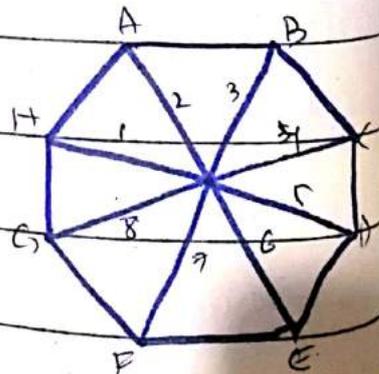

A hexagon has 6 lines of symmetry. i.e. line 1, 2, 3, 4, 5, 6.

### 2- OCTAGON:

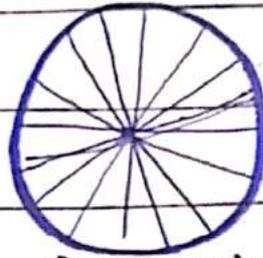

A shape with 8 equal sides is called octagon i.e.

A octagon has 8 lines of symmetry.

### 3- CIRCLE:

Infinite number of lines can pass through center of circle and divide it into equal parts, thus, it has infinite lines of symmetry.

### VOLUME OF EGYPTIAN PYRAMID:

Height of Pyramid =  $h = 146.6 \text{ m}$ .

Baselength = " =  $b = 230.6 \text{ m}$ .

Volume of pyramid =  $V = ?$

As pyramid is a triangular shape so ~~area~~ area of a volume of Pyramid is.

$$V = \frac{1}{3} A \times h$$

where  $A = \text{area}$  ;  $h = \text{height}$ .

$$\text{Area of pyramid} = \frac{1}{2} b \times h$$

so

$$A = \frac{1}{2} b \times h = \frac{1}{2} \times 230.6 \times 146.6$$

73.2

DATE

Y: \_\_\_\_\_

$$\text{Area } = A = \cancel{108709.92} \quad 10902.98$$

Now,

$$\text{Volume of Pyramid} = V = \frac{1}{3} A \times h$$

$$V = \frac{1}{3} \times 10902.98 \times 1466$$

$$V = 825,992.29 \text{ m}^3$$
