THE ESSAY

According to a definition, 'Brain Drain', academically also known as the human capital flight is the large scale migration of highly educated, skilled and talented people of less economically developed countries to highly rich and developed countries of the world due to conflicted issues, political issues/political instability and lack of opportunities in the developing countries.

Globally, relocation of intellectuals is as old as mankind. This terminology of Brain Drain originated in 1960s, when most of the intellectuals like scientific people and engineers who were the real

assets or the future of any country, emigrated from United Kingdom to America.

The unsolved issue of Brain Drain is happening all over the world for the sake of better working conditions including the island nations of the Caribbean, the antennix colonies of Africa and other federal economies like Soviet Union previous Eastern Germany, where aptitudes were not more fairly salaried. This phenomena was not as severe till 1960's but with the huge capacity migrate to North America from less developed regions.

This concept of "Brain Drain" is a matter of serious concern for any nation because it take off individuals from their homeland to another foreign land. Often people go abroad to pursue higher education and settle there because of better working opportunities and attractive pay packages. Experienced professionals migrate to other countries for better career prospects. They get attracted by better standards of living and quality of life, higher salaries, access to advanced technology and more stable political conditions in the developed countries which lead to migration from less developed countries.
