

Artificial Intelligence: Its Merits and Demerits.

1. Introduction

Thesis statement Artificial intelligence means the use of computer instead of human intelligence. Artificial intelligence has different merits such as reduction of work load, error detection and accuracy etc. But, on the hand, it also has demerits such as unemployment and cost issues etc.

2. Analyzing the concept of Artificial Intelligence.

3. How Does Artificial Intelligence emerge in the world?

4. Merits of Artificial Intelligence are:

- a) It reduces heavy work load.
- b) It works more in less time.
- c) It works more accurately and effectively than human.
- d) Artificial Intelligence is available for 24/7 **Phrase it properly**
- e) It does things which are not possible for human.
- f) It takes unbiased decisions.
- g) It works as human assistant.

h) It gives solution of every problem ✓

5. Demerits of Artificial Intelligence are as under:

a) It increases unemployment ✓

b) It tries to replace human ✓

c) It takes emotionless decisions ✓

d) It increases dependency on

machines ✓

e) It creates many problems

such as health issues. ✓

f) Artificial Intelligence is

very costly. ✓

g) It harms privacy of people. ✓

h) It cannot think out of

box ✓

i) It gives wrong information ✓

6. Conclusion

Add few recommendations to address these demerits

The arguments should be more specific, as they are very generic
