6) Conclusion

Essay:

Introduction

Have you ever wondered why education has been given such an importance from medieval ages till now? Why did the Greek philosophers like Plato and Aristotle talk much about higher education? Why the first revelation of Islam was about knowledge? Why did Holy Prophet ^(PBUH) command infidels of 1st was to teach muslims? And why Alexander The Great theft nothing but books from sub-continent? And even why mongols destroyed completely the House of Wisdom at Baghdad? Why during the downfall of a nation is was a revolution wise people tried to defence their nation through writings?? It is just because only the higher education is the key for the survival of nation in any collapse. It is the highest education which gives awareness to the masses about the socio-political rights as well as duties. Only through the awareness, democracy and merit prevailed in society. Citizens become responsible and bring much needed innovation and entrepreneurship in society, which ^{that} is responsible for long-term prosperity and the leading role in global world in the era of technology. Nonetheless some flaws in higher education including issues

in organizational structure and policies along with poor research work make it hard to play its role as savior of nation. However through some efficient efforts such as ensuring meritocracy and availability of education to all with sufficient choices of discipline, granting enough budget to meet the needs of modern time, and increased collaboration between industrial and educational sectors. Higher education is proved to be the savior of nation via playing its role in all steps of progression. While the quantity and system of education can be debated, the absence of progress without it is an established fact. Through overcoming the flaws in higher education, it can make youth able enough to secure the nation from any political, social or natural crises.
