

Disaster Unpreparedness is actually the main concern for Pakistan. The country has witnessed floods in 2010, 2011, 2012, 2021, and 2022, what was common in all the floods, was Unpreparedness. According to a famous proverb, "To understand what is coming at you, you need to understand what has happened before you." Unfortunately, the country has never learnt anything from the history, resultant, losses done by the recent flooding of 2022 are before one's eyes. Hence, disaster unpreparedness is the actual problem.

In addition to disaster unpreparedness, public unawareness and stubbornness is another problem that

the country is faced with. Whenever ~~any~~, any disaster such as Earthquake or Flood occurs, public shows reluctance, and do not listen to the administration. Recently, ADG Noshera, Quwatul-Ain, forced people to evacuate their houses, and get <sup>themselves</sup> settled into the refugees camps. Although, people were reluctant to do so. Hence, Unawareness in the public is also <sup>a</sup> factor responsible for huge damages.
