4- Conclusion:

Essay:

"The United Nations as now constructed is incapable of freeing mankind from the scourge of war." Larry L Leonard. This war creates a number of conflicts across the globe, and it impacts on every segment of the life. Owing to the international conflicts, the world economy has been experiencing a number of crisis, since the dawn of the 21st century. In this regard, the trade volume between the countries is shrinking day by day, and it creates impending in flow of goods. Moreover, following arguments are clearly showing that the international conflicts have plunged the global economy into a new crisis such as, the risk of high debt level has increased in a number of developing countries, it creates the catastrophic food shortage across the globe. Furthermore, owing to the international conflicts, the ^{conventional} arms racing between the countries is also increasing. Beyond to this, international conflicts damage the environment and rising global warming in the globe. Not only this, the international conflicts have also increased the refugee crisis ~~in~~ throughout the world. It is the testing time of the international organizations

particularly the ^{needs} UNO to take effective measures to overcome ~~these~~ ^{the} conflicts among the countries across the globe. In this regard, following measures can be overcome the international - conflicts. For instance, it is necessary that UNO must take practical measures to save the mankind from the scourge of the war. Adding to this, the role of ^{the} developed countries are also important to overcome ^{the} conflicts by opting the mediation policy. Through mediation policy, countries can resolve their issues in short period of time. In fact, international conflicts have plunged the world into a number of crisis, but these crisis can be overcome with passage of time so, it is hoped these conflicts between the countries will be overcome in upcoming period of time.

Dilemma of water and energy crisis in Pakistan

Outline

i- Introduction

Thesis statement:

Dilemma of water and energy crisis is rising day by day. Different factors are responsible for this issue such as political polarization in country, the rapid growth of population, lack of facilities to store the water and among others. However, these issues can be mitigated with following measures.

6- Conclusion:

Essay:

The survival of the living and non living things are going to be jeopardize day by day. Owing to the, water and energy crises are soaring and they are creating a number of issues for all living and non living things.

In this regard, following factors are responsible for creating water crisis in Pakistan. These factors are: political polarization is rising day by day in society, country has insufficient resources to store the water, the rapid and unplanned growth of urbanization creates water crisis in Pakistan. Moreover, this water crisis creates energy crisis. Adding to this, energy crisis happens in Pakistan because country has lack of dams to store the water, the water distribution between the units also creates and prevents energy crisis in the country. Not only this, but colourful policies of the lawmakers are also rising this issue at the large level. As a result, it creates a number of consequences on country such as the declination of the industrial growth, deprecation of the currency and declination of the foreign direct investment. However, these crises can be overcome with following suggested measures. First of all, it is necessary to create political consensus among the province to establish Kala Bagh dam. Secondly, it is important that all political parties need to work together for the national interest. In fact, energy and water crisis are continuously damaging the country in all fields. So, it is necessary for country's think tanks to take effective measures to overcome this issue before it becomes hurt country's economic growth.
