

Climate Change: Are We Doing Enough?

Outline

1- Introduction

World has made significant efforts for dealing with climate change through climate diplomacy. However, those efforts doesn't seem enough after witnessing recent devastating manifestations of climate change.

2- What is climate change? Evidences of our insufficiency to deal with climate change

3- Our efforts to prevent climate change

- a) Setting targets of reduced CO₂ emission by
- b) use of renewable energy resources.
- c) Moving towards Green Economy
- d) Introduction of Electric cars
- e) Enhance Biodiversity conservation
- f) Establishment of "loss and damage" fund.

4- Why these efforts are not enough?

- a) No noticeable progress around the globe
- b) Absence of compliance mechanism among countries
- c) Lack of funds for mitigation, prevention and adaptation strategies.

5- Why countries are resistant to do more?

- a) Because of Economic liabilities of countries
- b) Due to ever-rising competition among states.

c) Owing to trust gap

- Between public and government
- Among countries (both developed and developing)

6- Efforts needed to tackle climate change

- Strategies like recycling, Biofuel energy, generation, reforestation etc must be adopted.
- Better governmental rules and regulations are required.
- Land-use mapping must be given importance while reconstructing devastated areas.
- Biophilic and sponge model must be added in Urban planning.
- Improve agriculture practices must be adopted.

7. Conclusion

There has been significant efforts to deal with climate change but after floods, wildfires and hurricanes, the world has realized that we must put some efforts to deal with the upsurge of climate related events.
