

The explosion of software (including a massive repository of knowledge and information via search engines like google) and its spread all over the world mainly from the USA to China and India and beyond have enormously contributed to the global buildup of intellectual capital, and the ability. The playing field which was being leveled and flattened in 2004 as referred to by Thomas Friedman has now stood leveled and flattened concerning access to knowledge, information, collaboration, interdependence, and competition with a sense of independence. China has now challenged America in the economic domain. Protectionism and isolationism were the norms of the past. Any effort made in this regard at present will be artificial, temporary, and short-lived. Things are moving ahead with a speed never witnessed in the history of mankind. There is a phenomenal increase in a global network of knowledge sharing, product and component manufacturing, assembly, marketing, and delivery. These economic dynamics are adding to the spread of prosperity around the globe once the prerogative of the imperialist powers only. All directions moving investment culture is vaporizing the monopolies of the past. The most pertinent question now for any nation, organization, or even an individual is to see where and how it can best fit in this highly competitive and integrated world, by making use of its strengths and weaknesses of others.
