

Paragraph:-

The Threat of Global Warming
and the ways to counter it

Topic sentence :-

Emission of greenhouse gases from industries **is** the biggest threat of global warming. Among all greenhouse gases, carbon dioxide **is** contributing **the most**.

Explanatory sentence-

Carbon dioxide, methane, nitrous oxide, water vapors, and chlorofluorocarbons are the (greenhouse) gases increasing the temperature of Earth's atmosphere (phenomenon known as global warming) because these gases have the ability to absorb, trap, and scatter the heat.

S.P **Avoid using () again and again.**

Carbon dioxide emitting from **thermal power** plants, of combustion of **fossil fuels**, steel industry, paper and plastic industry, textile fertilizer, and ~~from~~ cement industry is causing imbalance of its (CO₂) concentration in the environment. Hence, become a monster posing serious threat to environment in the form of global warming.

Avoid cutting.

Since the middle of the 20th century, annual emissions from burning fossil fuels have increased every decade.

According to IPCC, ~~the increase in carbon dioxide levels~~ has led to global warming.

According to IPCC, carbon dioxide ^{level} imbalance in the atmosphere which is 420ppm today while it was 300ppm in 1950.

conclusion

This shows carbon dioxide ~~is~~ ^{emission} contributing a major role in becoming a cause of global warming.
