

CSS 2018 Precis ~~Impact of climate change on human nature~~

Title: ~~The Spectrum of Climate - A Factor Shaping~~  
Human Behaviours.

A comparatively colder climate makes people more active as they become prone to continuous challenges. The northern European climate, for instance gives the optimum blend that encourages survival practices due to the harsh conditions but is not extreme enough to halt the spark. Body and mind both develop strength in the course of acquiring logistical provisions. However, such is not the case in the tropical climate, where ~~fairly~~ relaxed life is possible and the basic resources are easily accessible. This contrasting behaviour is also visible in our lives across different seasons.

Do not merge two different ideas together

Note:

Could you please also mark it out of 20 so that I know where I stand.
