

Topic: Despite its urgency, climate change is the most neglected cause.

Outline:

1. Introduction

Despite the necessity to address climate change, it is still unknown and being neglected by humans. This neglect is affecting the Earth severely and is ruining its environment. Awareness about climate change and implementation of sagacious steps for environment protection may diminish the crisis. (My words)

2. Climate change has been ^{the most} neglected cause in spite of its necessity

3. Why there is a need to address the climate crisis?

- a- Soaring global temperatures
- b- Melting of glaciers
- c- Rising global sea levels
- d- Frequent events of floods
- e- Eutrophication or loss of marine life
- f- Staggering economy
- g- Looming food crisis

4. How climate change remains the most neglected cause?

- a- Lack of consensus among global community
- b- Dearth of international political will
- c- Unwillingness of developed countries to make carbon cuts

- d- Ignorance of people regarding climate change
- e- Lack of Environmental policies and framework
- f- Environmental degradation due to frequent unwise human activities.

5. Way forward: Measures to overcome the neglect of climate change (cause)

- a- Spreading awareness about climate crisis
- b- Controlling population explosion
- c- Mitigating the concentrations of GHG's
- d- Adopting afforestation.
- e- Conclusion.

Essay:

Lately, Earth was not feeling well. She could not breathe properly and was running a high fever. Sometimes, she felt so sleepy that she would fall asleep amid rotation and the sun's rays scorch her. She was worried about her deteriorating health and visited the doctor. Upon her visit, she was diagnosed with Global warming due to climate change. Earth came out from the hospital dejected for she knew there was no hope, the humans will never understand it and her suffering will only increase with time as climate crisis get worst. This indicates that the ongoing climate change is a disastrous issue which need immediate attention. Otherwise, it would reach a level where it will become irreversible. It will exacerbate with time as manifested in global warming, rise in sea levels and glacier ablation which resulted into rampant flood events, poor economy and droughts. These crisis of climate change are generated due to the neglect and lack of political will and international global community. In addition to ^{neglect of} this, developed world is unwilling to control carbon emissions of their industries through carbon cuts. Besides, lack of awareness regarding environment among public and non-implementation of environmental policies contribute to the crisis. In spite of the necessity ^{equally}

to address the climate change, it is still unknown and being neglected by humans. This neglect is affecting the Earth severely and is ruining its environment. Awareness about climate change and implementation of sagacious steps for environmental protection may diminish the crisis.
