

## (CSS-2018) PRÉCIS

Cold climate is beneficial in regions with mild temperatures such as Northern Europe. ~~Cold~~ where <sup>extremely</sup> cold climate engenders a sense of despondency, <sup>extremely</sup> hot climate induces lethargy in individuals. Conversely, moderately cold climate develops tenacity to keep <sup>one</sup> ~~oneself~~ warm and well-fed. ~~How~~ Moreover, people in tropics do not have to exert themselves in ~~the moderate climate~~ to stay warm and well-fed due to ~~most~~ mild climate and abundance of resources. Therefore, the difference between people from ~~these~~ areas of such contrasting climates resemble our own energy levels throughout the year during different seasons.
