

Agriculture & water Problems in Pakistan:

Agriculture

Water plays vital role in agriculture,

(TS) and agriculture is facing water problems badly in Pakistan. Water

(Exp.) quantity in Pakistan is becoming low which is adversely affecting agriculture sector. Floods, shortage of

(SP) water, urbanization of agricultural land, lack of dams, and dismanagement of water are the main problems

that declining the agriculture sector.

(Evid.) As 2022 Flood worstly effected the agriculture, more than 80% of standing crops destroyed in

(CS) Sindh. This shows that water problems have not only effected agricultural land, but also socio-economic life of Pakistan.
