3. Why enhancing intellectual ability is neglected in Pakistan's education system
(a) Unproductive education policy by the government

The unproductive education policy by the government is the consistent issue in Pakistan's education system.

There are many flaws in Pakistan's education system, which is outdated.

In fact, the lack of education budget makes the infrastructure inadequate.

Pakistan is spending only 2.8 percent of the GDP on education sector.

These low budget and inadequate infrastructure makes the students non-intellectual. The poor the infrastructure

the poor ~~will be~~ more students will be non-intellectual. In fact, the poor infrastructure effects the extra-curriculum which stops students mental growth.

In short, by implementing an effective education policy and making it first priority it can be productive.

3. Why enhancing intellectual ability is neglected in Pakistan's education system

b. lack of cognitive teaching skills

The lack of cognitive teaching skills in Pakistan's education system is ignoring the critical thinking ability. Moreover, the education system of Pakistan is ineffective and lack of practical world. Education plays significant role to uplift the nation's development. In fact, the most important issue is the outdated curriculum. There are so many topics which are related to past and its relevancy to the present is low.

The world is focusing on making robots but, on another hand, Pakistan is stuck in traditional education system.

The recent initiative of the Single National Curriculum was a good initiative it should be appreciated. In short, without education progress no nation can achieve its goals. Similarly, Pakistan's education system needs to improve its education specially the lack of cognitive teaching skills.
