

People have become overly dependent on technology

Outline

1- Introduction: Thesis statements:- People depend on technology in their every task and need. In fact, people have become overly dependent on technology for their education, shopping, work efficiency etc. Therefore, people have overly become dependent on technology.

2- Advancement of technology leads to human dependency

3- How people depend on technology? (Thesis)

- a) Technology leads to education dependency
- b) People depend on technology for online shopping
- c) e-reading newspaper has promoted technological dependency
- d) Government officials promote technology for work efficiency
- e) People depend on technology for contact

4- People do not overly depend on

Technology (Anti-thesis)

- a) Traditional classroom preference replaces dependency on technology
- b) People enjoy more doing physical shopping
- c) Keepers of paper reading do not depend on technology for e-newspaper
- d) Government officials use own creativity for work efficiency
- e) People love physical contact and physical meetings

5- People and technology move together (synthesis)

- a) Education is shifted as digital learning programme
- b) People do online shopping due to technological advancement
- c) E-newspaper reading concept is common today
- d) Technology is introduced in every field of government
- e) Digital meeting has replaced fear of remoteness.

6- Conclusion

"Technology does not depend on people; people depend on technology." (Faisal Bari, life style recalculation, 2023). People depend on technology in their every task and need. In fact, people have become overly dependent on technology for their multiple tasks, such as education, shopping, work efficiency etc. Therefore, people rely on technology today. Almost all dependency is shifted on technology. People love receiving digital education and used digital applications for shopping. Moreover, government employee also prefers technology for efficiency of work. Further, e-reading newspaper has replaced the concept of paper-reading. Not only this; but people also depend on technology for contact. Despite all above, it is claimed that people enjoy traditional classroom learning, physical shopping, using own creativity in their work for efficiency. Along with these, people still love paper-reading.

newspaper and like to contact physically. However, technology has potential today. In fact, digital learning is preferred more and also online shopping is facilitated due to technological advancement. Moreover, technology is become necessary in government work and people rush towards technology to come in contact with people. Therefore, people have overly dependent on technology.

Advancement of technology leads to human dependency. Due to day by day advancement in technology has made human work easier and people prefer technology in their needs. In fact, advancement of technology further encourages human dependency on technology. According to a survey conducted on social media, "almost 90% of people want technology in their life to make their life more comfortable."
(- Need of technology, 2020)

Therefore, advancement of technology leads to human dependency.

People depend on technology for multiple uses. Among which is education dependency on technology. In fact, people depend overly on technology for digital education. However, digital learning is encouraged more today in order to get awareness and increase literacy rate. According to a report, "Kenya government has almost shifted digital education and has introduced hundred small digital applications working on solar panels." (Neda, global skills, 2023). Therefore, people depend on technology for education.

Further, people have dependent on technology for shopping. The concept of online shopping is prevailing every corner of the world today. In Pakistan, most of women do online shopping.

in order to save their time. According to a report, "about 50% of women has done online eed shopping during Ramadan business." (Neda, digital shopping, 2022). Therefore, people also depend on technology for shopping.

Furthermore, e-reading newspaper is become a new but fast prevailing concept due to technology. People love e-reading newspaper on easy access and dependancy on e-reading promotes dependancy on technology. (Almost all students of commission exams prefer e-reading newspaper in order to save their time of further study. "E-reading newspaper, books, journals, novels is become a more common trend on social media." (E-learning platform, Sayib, 2021). Thus, e-reading newspaper is also an evidence of dependancy on technology.

Moreover, government officials also promote technology for work efficiency. Almost employees of government demand technology in order to produce rapid and solid growth in their work. In fact, government has also introduced technology in order to make a transparent and accountable management. As per the latest report, Sindh government has introduced a digital biometric application for the biometric of newly as well as old appointed teachers in order to ensure their job performance." (Zubaida Mustafa, reforming education system, 2023)

Hence, government officials also rely on technology for work efficiency.

... but not the least, people depend on technology to come in contact. Due to globalization of people, world is become a global village and people are moving away from their lovers for their earning and learning.

But, fortunately, technology has removed miles of distance and people have become overly dependent on technology. People use, WhatsApp, Facebook, Email, Twitter, Instagram etc. for contact with other people across the world." (Saqib, digital world, 2020).
Therefore, people depend on technology for contact with other people.

Besides all these, it is claimed that people do not rely on technology completely and people have not dependent on technology. Among evidences one is traditional classroom learning form of education. In fact, people across the world prefer traditional classroom learning for their ideological preference. Almost students receive physical education even today. According to a report, "people in Pakistan prefer and get traditional classroom education due to poor internet service especially in rural society of

"Pakistan" (Hina Saleem, Pakistan and its rural future, 2023). Therefore, people prefer traditional education and have not become overly dependent on technology.

Moreover, people enjoy doing online shopping. In fact, people love outing along with shopping and prefer physical shopping. Almost half of people leave homes for physical shopping.

According to a survey, "people told they love doing physical shopping in order to refresh their minds and souls along with outing." (Survey in pattern of shopping conducted in social media, 2022). Therefore, people have not become overly dependent on technology and still do physical shopping.

Further, people still love paper-reading. In fact, paper-reading news paper culture

still exist in the world especially in Pakistan. Pakistan is the fifth largest populated country in the world and majority of them is old-people. Such old people love paper-reading newspaper in leisure and also encourages the young for paper-reading. 'Old people in Pakistan love reading newspaper and enjoy their time passing in touch of love of paper-reading newspaper.' (Scope of paper-reading, Faisal Bari, 2019). Hence, paper-reading newspaper culture still exist and is encouraged by paper-reading lovers.

Furthermore, government officials uses own creativity for work efficiency. Several departments have complained of technological device issue and prefer own creativity for work efficiency. In fact, technological faults forces people to use own creativity and skills

in order to get efficient work.
 According to a survey, "recently conducted census in Pakistan met several hurdles, one among was the issue of presence of digital devices." (Ibrahim Hunda, Census Contrary, 2023). Hence, people prefer own creativity in work to get efficient outcomes.

Besides all, people love physical contact and physical meetings. In fact, people perception on technology do not allow them depend on technology. People consider technology had replaced direct contact of people and their bond. As per conducted survey on social media "it is result that people think the age before technology was a golden age and technology dependency has made people away from interaction" (Consequences of technology, survey on social media, 2018). Therefore, people prefer physical contact and physical work.

Despite all these statements, people move together with technology. Obviously, digital education is one of the evidences of dependency on technology. The world is globalized and due to global race in education, new applications of technology advancement have introduced to bring out-of-school children and to increase literacy. "Single government has introduced digital e-learning programme with the help of UNICEF to bring out-of-school children towards education." (e-education, Hwa Soeun, 2023). Hence, digital education need has made people overly dependent on technology.

Along with digital education, digital shopping patterns are also prevailing that show dependency of people on technology. In fact, most of housewives and hostel students use technology.

for estiniss of digital shopping. Several applications have facilitated online shopping across the world. "Alibaba, Amazon, Google chrome etc have introduced new methods and qualitative shopping patterns." Thus, online shopping is become more common today.

Further, e-reading newspaper concept is become a common proof of dependency of people on technology. Almost students prefer e-reading newspapers for update of latest news. E-reading newspaper has made easy to update from any latest news and has replaced old tradition of reading paper newspaper. According to several student, "they use e-newspaper to update from the latest news and prefer e-newspaper in order to save their time." (Saqib, e-newspaper culture, 2019).

Therefore, e-reading newspapers show people have become dependent on technology.

Moreover, technology is introduced in every field of government. Several steps are taken to promote technology in government work and needs.

In fact, in schools, colleges, universities, hospitals, markets and so on technology is overused. According to a report, a government of Sindh has facilitated Robotics surgery in hospitals of Karachi for several surgical operations. (Institute of liver and kidney transplant, Karachi, 2023). Thus, people have overly relied on technology today.

Last but not the least, people have dependent on technology for contact. In fact, technology has replaced human fear of

distance. In globalization of the world, people move from one corner to another corner of the world and are become distant from their lovers. But, fortunately, technology has replaced human fear of distance from one another and people rely on technology to come in contact. Therefore, people uses technologies for contact people around the world and hence, people have become overly dependent on technology.

In conclusion, people have become overly dependent on technology. Several multiple tasks are facilitated through technological advancement such as digital education has facilitated education across the world. Not only digital education, but digital shopping is also an evidence of people dependency on technology. Moreover, government has also relied on technology.

for the welfare of government machinery. Besides this, e-learning and reading is become more common today. Despite all above, still useless argue exist that people have not overly dependent on technology. But, fortunately, digital form of education, digital shopping at parks, and e-reading pattern are evidences of people dependency on technology. Therefore, people have overly dependent on technology.

"In globalization world, advancement of technology has made people dependent on technology not geographically, as well as historically technology has made human life comfortable."

(-Thomas Friedman, The World is Flat, 2005)
