

# Globalization pros and cons

## Outline:

1. Introduction
  - Thesis statement
2. Crunch paragraph
3. Pros of Globalization throughout the world
  - a - Technological Revolution all over the world
  - b - Promote Free Trade among countries
  - c - Growth of business in developing areas
  - d - Information revolution about every aspects
  - e - Promote innovation in community.
  - f - Finish communication Gap between countries
  - g - Digitize the business to produce ease
4. Cons of globalization throughout the world
  - a - Spread of epelemics easily
  - b - Cultural diffusion among countries
  - c - Crimes, theft increases day by day
  - d - More interdependence of humans on technology
  - e - Political ideology inforcement
  - f - False informations spread over the world.
5. Implication to get more advantages of Globalization
  - a → Globalization itself spread awareness
  - b → Special security system to identify theft.
  - c → Improve education system of all developing countries
  - d → Proper and perfect use of AI revolution should implemented.

## 6. conclusion

## Introduction

Globalization in terms describe how trade and technology interdependent and connected to each other. As like every other thing, Globalization has pros and cons. Globalization change the entire world into a global community and

give easy access of knowledge and communication to every person in society but on the other hand, people with dirty minds take advantage of that and do theft. For example: In Murafarabad, 5 persons attempt rape to girl and make her video, leaked that and Blackmail her. (Lahore Dawn New 24 May 2023). People should have to aware of that Dirty minded people. Globalization is advantageous to some community but also dangerous for some other people as well.

### Globalization pros and cons to society:

Globalization has adverse effect on society. As it introduce the ways of living, human cannot imagine, trade became easy all across the world, it finish all boundaries and make free trade environment. e.g CPEC, BRI these are trades agreement between china and Pakistan and will give boost to economy. On the other hand Terrorism is just increasing, and it turns into nuclear war. e.g Russia do attack on Ukram city odessa but counter attack failed. (Lahore Dawn news, 24 May 2023). It has equal aspects of benefit and loss on human nature.

## Pros of Globalization throughout the world:

### a- Technology Revolution all over the world.

In recent years, there has been tremendous revolution of technology. Firstly, the people have just do use of technology to communicate, machines to take help but Now, we have done a lot of innovation in artificial intelligence. Many AI tools just do the work automatically which took your most of time and not enough robots are also made to less more man work e.g chat gpt, tom AI, etc. Google is also going to introduce its call by google to your nearby best saloon and other services and set appointments regarding that. (By Sundar Pichai, Google CEO in seminar). Technology revolution will increase day by day and will change that entire world.

### b- promote Free trade among countries

Nowadays, trade and business is global throughout the world. There is no barrier between countries all countries are selling their products within and out of the country. e.g Amazon selling products in United States, United Kingdom, Canada and Mexico Online and have earned 514 billion USD dollars in 2022. Free trade create many online home based working jobs and business is great opportunity for people to earn money without have certain educational degree etc.

### c- growth of business in developing areas

Business have tremendous growth due to Globalization. Connection with people make different ideas and mostly benefited in developing countries. As developing countries do investments, trade and get benefit with opportunity to make their Infrastructure. e.g. china is the best example as it was previously developing country but now somehow considered in developed countries. Growth in business proved to be more helpful for developing countries.

### d- Information revolution about every aspects

Information revolution just happened due to globalization and make knowledge accessible. Every kind of knowledge you want you can get on mobile phone at any time. e.g. medicines, machinery, business, education etc all are on youtube, twitter etc. Social Media became a big source of information you don't have to search books for some information you want.

### e- Promote innovation in community.

When people connect with each other they made up impossible things possible. New ideas and innovation have

done many inventions in world. Peoples are making innovative ideas, AI revolutions just a hot topic these days. e.g AI augmentative robots have senses vision camera which do assigned task can do multiple task as they are going to launch AI talk show. (By newglobal official, AI talk show) "There is no matter from where you belongs to, if you have an idea you can become an entrepreneur" (By Sunder Pichai, Google CEO, in an interview). Globalization promote different innovation which will change more life style of humans.

f- finish communication gap between countries.

Globalization finish communication gap between countries as people share their ideas freely on social media. Twitter is the best source where you can connect with international personalities. e.g Any issue happen in side of world just spread out. If we just check news, "Imran Khan speeches, arrest news" etc spread everywhere people give their opinions in that person doing something wrong you can impeach their video and expose them. "Person record video for policeman taking 5000 fine, which is unethical". Communication in any corner of world is now as much easy as talk to person sitting next to you.

g. Digitllize business to produce ease

Digital Revolution make people safe, more updated and educated as well, A lay man wanted to get every thing and do nothing as digitization make that need business a person who need money will do work for person didnot wanted to go out. e.g food bands, careme, online academies, online youga, cooking classes etc just changed life style too much, visa cards, high level security just happened due to digitization. People didnot goout where there is no internet service. e.g New slogan "Roti, Kapra, Makan or internet" materialize. dreams of digitization (Pakistan today, By Abdul Wahab, 13 Jan 2023)  
Globalization's improve world by advancement in digitization.

#### 4- Cons of globalization throughtout the world

a- spread of epedemics easily:-

Nowadays, world is as much connected to one another as people move from one country to other easily. People are not bounded now as it effects negatively as any virus, disease just spread as soon that no one can just realized what happened and many

countries became just part of that. It takes time to get any solution but that makes emotional, social, economical, health damage. e.g. On March 11 2020, WHO pointed 3 million cases and 207973 deaths in 213 countries (economic consequences of Covid-19 outbreak | Need for epidemic preparedness article). Globalization also become source of widely spread diseases in countries.

### b-cultural diffusion among countries

Culture is backbone of every nation if it destroy then Nation destroy. Globalization have just make everything in social media, youth, kids, elders follow culture trends on social media they forgot their own culture. If we talk about Muslims there are just small community wearing abaya others are going with trend. e.g. "dil ye pulkari song dance viral by girl" people give them too much hype there one dress sold in crores." (Youtube, Instagram). Youth are not aware of their culture and religion just following global trends and risk their identities.

### c- Crimes, Theft increases day by days-

Dirty minds can make things into their use, as due to globalization, cybercrime, blackmailing, hacking, identity theft is on its edge. As people rely on Instagram,

youtube and on social media for purpose of information and business but that people get advantage of people new to them. Now a days In Pakistan and on social media the persons are just taking advantage of people with that "we wanted to do something in life" and false use motivation, big dreams take money and just left them broken e.g. Dant's is person millinore in canada, person on instagram have their fake permit card, fake websites and taken different amount money in dollars as name of investment and leave them beside. e.g. east eagle company → women's became millioner as their business is to gather people and they taken money from them and give 20% to one who refers to him. all fraud crime, money making happen due to globalization our large community get trap there and earned millions of amount.

#### d- More independence of human on technology

Human Trust Blindly to technology as they are more dependent on them. In past, human do their works by themselves but now machines replace them. "Previously, humans have all important data in their minds, but now there all important details are in mobile phone and they are nothing without that" (Sandeep Maheshwar, Motivation speaker, seminar). Due to that new era of globalizations. The

one wanted to be employed should come to know to adapt change, use of technology, AI, as AI is replacing jobs rapidly the person who can handle that will be employed. 40000 employees are fired in united state due to AI take their place (Dawnnews, 22 May 2023)

e- political ideology inforcement.

political parties are inforsing their ideologies, due to globalization every minor issue in politics just came up to social media and create controversy.

Government cannot lie people as now every thing is in front of them. e.g Judge say shut up to Imran Khan judge and people start shouting and protesting (News official Glob, 22 May 2023). Political parties give their ideologies as they have free right to speech.

f- False information spread over the world.

Globalization increases access to information but cannot prevent false information to spread. People rely more on internet, as criminal mind person manipulated things as fake ids, lie to people, order something get something else. e.g Dorez send items not same as promise. e.g "False information is dangerous than no information", there is

fake and fall information spreading. g  
we are making 300 to 500 each day by  
"That earning system" etc is common line  
on social media as if persons are actually  
earning from them will never advise you that.

## Implication to get more advantages of globalization

a- Globalization itself spread awareness:-

Globalization can only itself solve  
their problems as it connected towards  
world as they can run campaign,  
give awareness, any first person if get  
theft should have to do all proceeding  
save others to happen with that, every  
person have social media to access and  
be aware people of that. we should make  
rules for as social media ceo <sup>should</sup> have the  
security system to identify theft and block  
account of criminal before theft.

b- Special security system to identify  
theft.

Globalization have done too much  
advancement and all time criminal  
take advantage of that and do crime.  
Globalization also connected criminal mind  
which together are destroying nation. they should  
have to work on security system as someone  
cannot get advantage of identity theft as

one step, Id card number, all our lives dependent on them. they should make security system which criminals can't identify.

c. Improve education system of all developing countries

Education is main part of any nation, as if their education system have no value, their nation will never grow. Globalization give easy access of education on youtube, person who wanted get education can get that but information, awareness depends on country as well. In India, Modi is doing more focus on education system and just have many talented persons earning million dollars in field IT, etc. eg. In Pakistan (Khaiber Pakhtunkhwa) PSC has submit remote that students don't know even basic information and could not get capable students for required seats" (Lahore Dawn News, 24 May 2023)

d. Proper and perfect use of AI revolution:-

Humans are making tremendous efforts in AI revolution, they have made girl robot and just hype on news these days. But these robots if have power to freely speech can say anything eg. in interview that robot said "I will finish man" and that create great controversy. (News official

Global News) AI should use for man, man should not use for A.I. As mobile phone makes youth their slaves and have no mindset about future just passing their time. production use of technology will lead us to success but incorrect, more than necessity use of technology is failure of humans.

### Conclusion:

Globalization is part of every person life as it has many advantages people have done AI, technology and information revolution which ends gap in trade communication, countries are they make all world global connected to one another. On the other hand it connected criminal minds that increases identity thefts crimes in countries, people dependent on internet cannot live without that even kids of two years take their feeders with mobile. so it not only causes diseases but finish the goal of life for youth. If prevention taken spread awareness, use technology not all technology to use you it is self-killing which is more bad than criminal thefts. If we took correct and necessity use of technology we will become successful nation.
