

Topic: Don't waste water
even if you are at
Living stream"

Outline;

1. Introduction

Thesis statement; Water conservation
lays a great significance
in the world because it shortens
the crisis that is ~~the~~ needed
to be tackled as soon as possible.

2. Water scarcity; a dangerous
issue

3. Water preservation guards against
rising costs and political
conflicts

4. Water conservation helps to
preserve ~~our~~ environment.

5. It builds safe and
beautiful communities

6. Water conservation protects
human health

a. Water safety ensures good water supply practice.

6. Conclusion

"Essay"

One should not use water in excess (israf) even if one was "located on a flowing river." (Al-Hadith). Water conservation is as important as shaving. As the world is facing a great challenge of water scarcity which has dreadful consequences on the economy, health and politics. Though seventy percent of the world is covered with water, ~~but~~ ^{but} only three percent (3%) out of which is fresh water ~~which~~ that is not enough for eight billion population. In this respect, water preservation is very necessary to deal with the crisis. As water preservation shortens

the rising costs and political disputes. It has a major role to preserve the environment by building safe and beautiful communities. Furthermore, water conservation protects human health and ensures good water supply practices. That's why water conservation lays a great significance because it shortens the crises that is needed to be tackled as soon as possible.

Water preservation guards against rising costs and political disturbance. As the world is facing an high inflation these days, every individual is affected much due to rising costs. If water is preserved, it develops the agri-foods like wheat, rice, maize, tomato etc. Once the food production is increased it smoothly decreases the high prices to lower one. ^{In addition,} The political disputes of water could be solved

through ^{adopting} keeping water safety measures, because it shortens the daily need for agricultural, power generation and industrial usage consumption. The main reason behind the political conflicts is gaining of economic power through agriculture and building power generation capacity.

If the water preservation is adopted the countries will be self-sufficient for water usage, and dispute easily would be solved.

To add, water preservation helps to protect the environment. Conserving water saves energy, Energy is needed to filter, heat and pump water to home, so reducing use also reduces carbon footprint. Using less water keeps more in our ecosystem and helps to keep wetland habitats topped up for animals like others,

voles, herons and fish. It also builds safe and beautiful communities, as a large amount of water is needed for fire fighting, hospitals, gas stations and health clubs etc. The amount of water would be available on condition that, ~~we~~ giving importance to water preservation.

Furthermore, water conservation helps human beings to protect against diseases. Water borne diseases like, Hepatitis, diarrhoea, typhoid and Coli infection are ^{mostly} caused by polluted water. If ~~water~~ therefore water conservation increases the volume of fresh water, which directly shortens the water borne diseases. On the other hand water conservation also increases good water supply practices. People don't adopt water safety precautions which results

poor supply to homes, hospitals, government offices, factories and industries. If water is preserved the supply practice should increase.

To conclude one may say that, water preservation is need of this era. Because a large number of people, animals and plants are being affected by water scarcity. If this crisis is not stopped, the world soon will face terrible consequences. Therefore the government as well as the civil societies, prominent public figures, teacher and students, in fact every individual must play its role to increase water preservation for offsprings. The government should restore its fresh water resources, build new dams, educate

farmers about water conservation. Start
campaigns within the communities.

and much more. This is the
only way through which the
water conservation could be
promoted that will have fruitful
consequences.
