

CSS-18

Although cold climate has fruitful effects in the temperate regions. But it has acts as a barrier in way of energy stimulation. In such way, most of energies are limited and left no space for performing active operations. Likewise, hot climate needs a small push to exert whereas intense cold minimize the human energies. Moreover, moderate cold engage the man more strenuously. Therefore, he has to face the tremendous wind in order to collect food for himself, and make his house strong on the contrary, in the tropical regions light clothes are needed which is easily obtainable. Also, less efforts exerted while searching food for himself. Above all, human nature can be analyze with the change of climate. Thus, hot weather makes life easy with less efforts and cold climate involves strenuous exercises.

Title: Association of climate change with human nature.
