

(PCS-2018) (450-500 words)

"Progress does not lie in mere scientific advancement"

Outline

Introduction

Thesis Statement: Scientific advancement is a tool for every nation's progress. Some people argue that progress has nothing to do with science. However, in the modern era, scientific advancement is important to compete with the modernized world.

a) Human life has shifted from the 'love to the luxurious life due to scientific advancement (Thesis).

b) The change in human life come due to socialization, science has not significant role (Anti synthesis).

c) In spite of socialization, human life has become modern after knowing the secrets of the universe through scientific research and development. (Synthesis).

Conclusion:

Essay:

In an ancient era, people believed in superstitious concept about worshipping of the Sun, fire and idols but after scientific research and development, many scientists unveil the truth of Universe such as the Earth is revolving around the Sun, not the Sun is revolving around the Sun therefore, the scientific advancement is a tool for every nations progress. Some people argue that the progress has nothing to do with science. However, in the modern era, scientific advancement is important to compete with the modernized world. Furthermore, human life has shifted from the cave to latans house moreover, human has unveil the secrets of the universe whereas, socialization has not played significant role for this transformation.

Human life ^{has} transformed from the cave life to modern life. like, with spaceaircrafts and the help of artificial satellites human reached into the space and explored universe.

Neil arm strong was the first human who landed on the moon. Science is exploring with the help of Hubble space telescope. Today, we are living in luxurious houses with automatic machines such as washing machines, fans, florescence bulb etc. which have made a great change in our lives. Furthermore, in an ancient era, people promote baster trade whereas, today we promote digital economy. Like, the china's digital economy is growing with the perstage of 49.5% (Digital economy of china, June 2023).

Inspite of positive impact of scientific advancement, opponents always argue that socialization has specifically transformed human life. They think that the family is the source of primary socialization. Furthermore, to bring broader level change into the society, one may need to bring the change at an individual level. Moreover, peer groups, religion, society, politics, ethics and morality are the agents of socializations which

have potential to make actual progress in the society.

Despite the fact that socialization plays a role in transformation and progress on individual level, but to compete with modern world, nation needs to fast and efficient progress which is only possible through the scientific development. Science has unveil the secrets of universe with the use of Hubble space telescope, Electromagnetic radiations, remote sensing techniques etc. Scientific inventions are ~~fast~~ playing efficient role in whether forecasting and predicting the chance of future natural disasters. Humans are doing their work automatically such as the use of artificial based robots and websites, are important in this regard. Chatgpt is the artificial intelligence based model which has potential to answer any query ~~efficient~~ efficiently and fastly.

In a nutshell, one may say that how scientific advancements have led to the progress of any nation, we are exploring the world and universe for the sake of betterment of human life. Socialization has not played an effective role in the advancement. Moreover the super powers such as the USA, Russia, Japan, Germany etc supervise the under developing countries and hold their control on them because of scientific advancement. Overall, if any nation wants to survive in the new era then scientific progress is important for it.
