VI- Conclusion

Topic: Brain Drain from Pakistan

God has created human beings as master creation of this world, based on cognitive abilities. This cognitive ability enables humans to achieve higher degree of civilization, progress, and prosperity. However, it is a fact that the development of cognitive abilities require a favorable environment. Skilled individuals possess brains that are like diamonds, precious and prestigious and paramount for the progress of a country. Unfortunately, many skilled individuals are leaving Pakistan in search of supportive environment, leading to the phenomenon known as brain drain.

There are various causes of brain drain in Pakistan, including political, economical, educational

then

and social factors. These causes have far-reaching repercussions for the state of Pakistan. Brain drain is negatively impacting the progress and development of Pakistan by weakening institutions and diminishing human capital. Moreover, its aftermath is visible in Pakistan's economy through dwindling productivity, reduced innovation, and high dependency on foreign remittances. Brain drain not only affects the economy but also

affects the economy but also has social consequences. The shortage of professionals in public sectors, such as health and education, significantly hinders access to quality services for the masses. Despite the serious consequences of brain drain, implementing precautionary measures by policymakers and stakeholders can effectively

counter this grave challenge.

In summary, Pakistan is currently experiencing a wave of brain drain due to many causes. However, by focusing keenly on key sectors of education and administration, Pakistan can ultimately overcome this recent wave of brain drain, and can ensure socio-economic progress within the country.
