

POVERTY IN PAKISTAN

Pakistan is a poor country. It's economy is dependent on the loan from IMF; it has borrowed 23 loans till now. Although it has a huge youth bulge, but there are no recent inventions. While a state is depending on external aid, it will become a debtor day by day due to external debt, and will default as a result of burden of loan.

Education

The educational system of Pakistan is adverse.

The system of education in Pakistan needs a proper attention; Pakistan is lacking a ^{good} learning process. ~~and is to~~ Although there are many good and high ranking institutes in Pak, but they have no equipped system for research. There is a need to encourage the research based work in universities, and to invest more and more in research based projects, so that Pakistan can get benefits from its youth.
