Q:4 Hamza spends 20% of his total income on house rent, 70% on domestic expenditure. If his savings is Rs 1800. What will be the total income?

(a) 20% of total income on house rent +
70% of total income on expenditure =
90% of total income his spent by himself.

100% of total income - 90% total expenditure =
= 10% savings.

A/c to the given condition:

Rs 1800 = 10% savings.

$$10\% = \frac{1800}{x} \times 100$$

$$x = \frac{1800}{10} \times 100$$

$$x = 18000 \text{ Rs Total income.}$$
