→ An Analysis on Population day.

World Population day

The world is observing population day. There are certain issues regarding population. The developed nations such as Japan, South Korea and other European countries, where birth and death rates are low. These countries are running short of working individuals, because there is luck of youth force on account of one child scheme. On the other hand developing countries, for instance Pakistan, Afghanistan and India where the population growth at peak. These countries are facing severe food crises, educating and maintaing a healthy nutrion. Therefore a comprehensive and a complete strategy is needed to deal with the population issue. As such Pakistan

should not follow one - scheme
child, for it will face a shortage
of individual force in next days.
Nor the state should increase
the population to face different
crises in future. Hence, the state
should follow a moderate plane.
where the rights must not be
violated, nor the population is severly
increased.

There is no need the state
must take a stance to
curtail the growing population itself
It should involve the provincial
governments, the community members
as well as the clergies.
The state must ensure the
religious concerns regarding growing population.
As such Iran, Saudi Arabia and
Bangladesh reduced their populations
to a sustainable limit. Further, the
women should be given awareness
about about family planning, and

government must provide medicines for contraceptives, and aware them a gape is needed between children birth for a healthy mother. It is also necessary that children would not face a food crises. There are few measures to shorten the population growth where Pakistan will not face severe challenges to deal the issue.
